## APPLICATION NOTE

## 1. Input impedance:

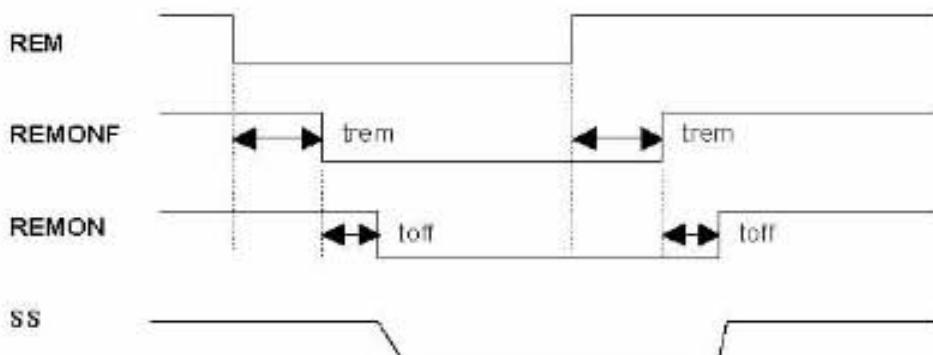

Pin No.	Pin Name	Input impedance
1	V33	47K Ω
2	V5	73K Ω
3	V12	47K Ω
4	PT	24 KΩ+4.6 KΩ

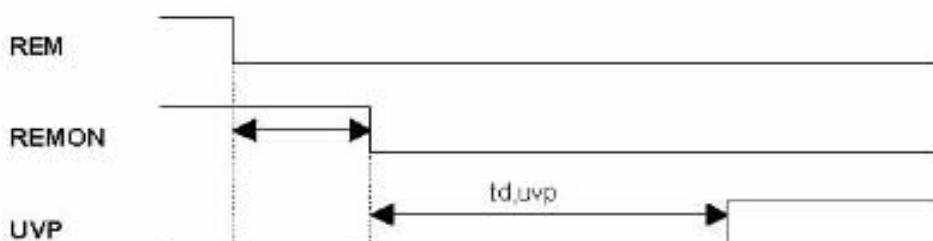

## 2. Sawtooth OSC. Function:

## 3. REMOTE ON/OFF :

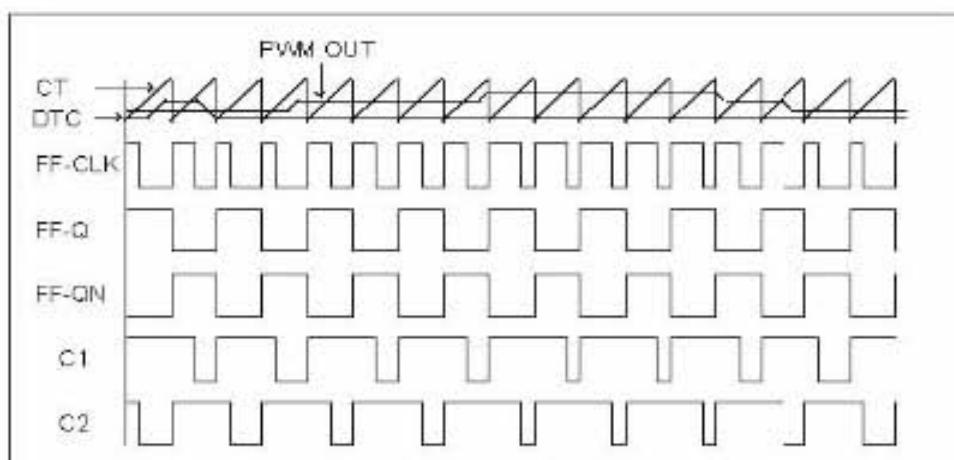

## 4. Under Voltage Protection Delay Time :

## 5. Pulse Width Modulation Block :

The output pulse width modulation is generated by comparison of the saw-tooth waveform from the capacitor  $C_T$  to the feedback of the voltage.

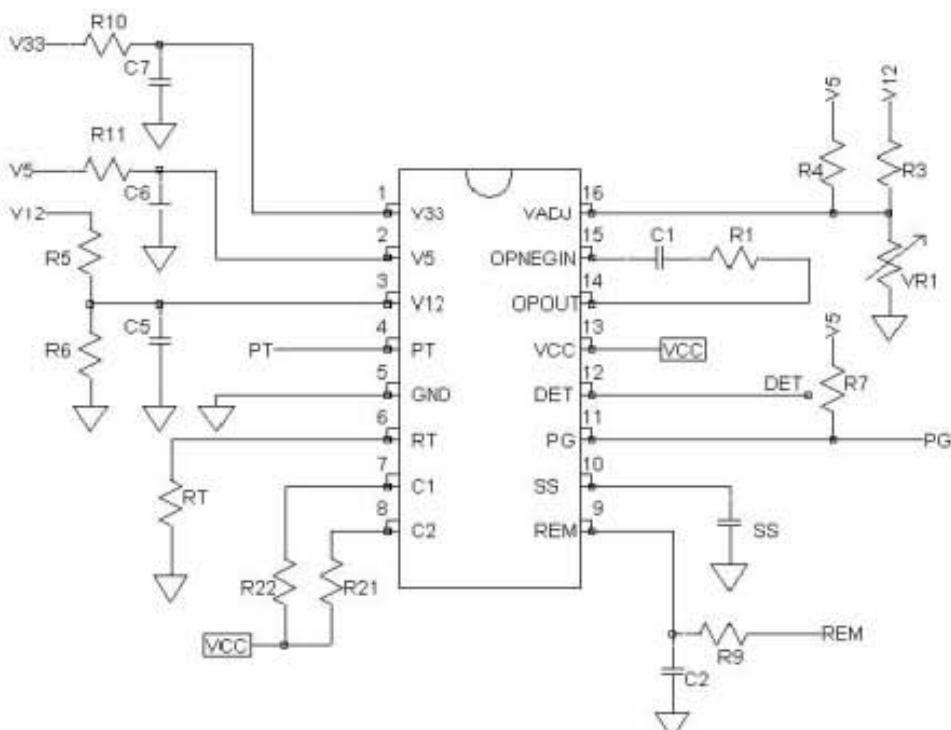

Therefore, an increase in feedback control signal amplitude cause a linear decrease of the output pulse width. Also, the SS(DTC and Soft-Start) limits the output pulse width. The timing diagram is shown as below:

## 6. The function of "PT":

This signal is prepared for extra OVP/OPP ( $V_{PT} > 1.25V$ ) or another Disable Under Voltage Protection function ( $V_{PT} < 0.62V$ )

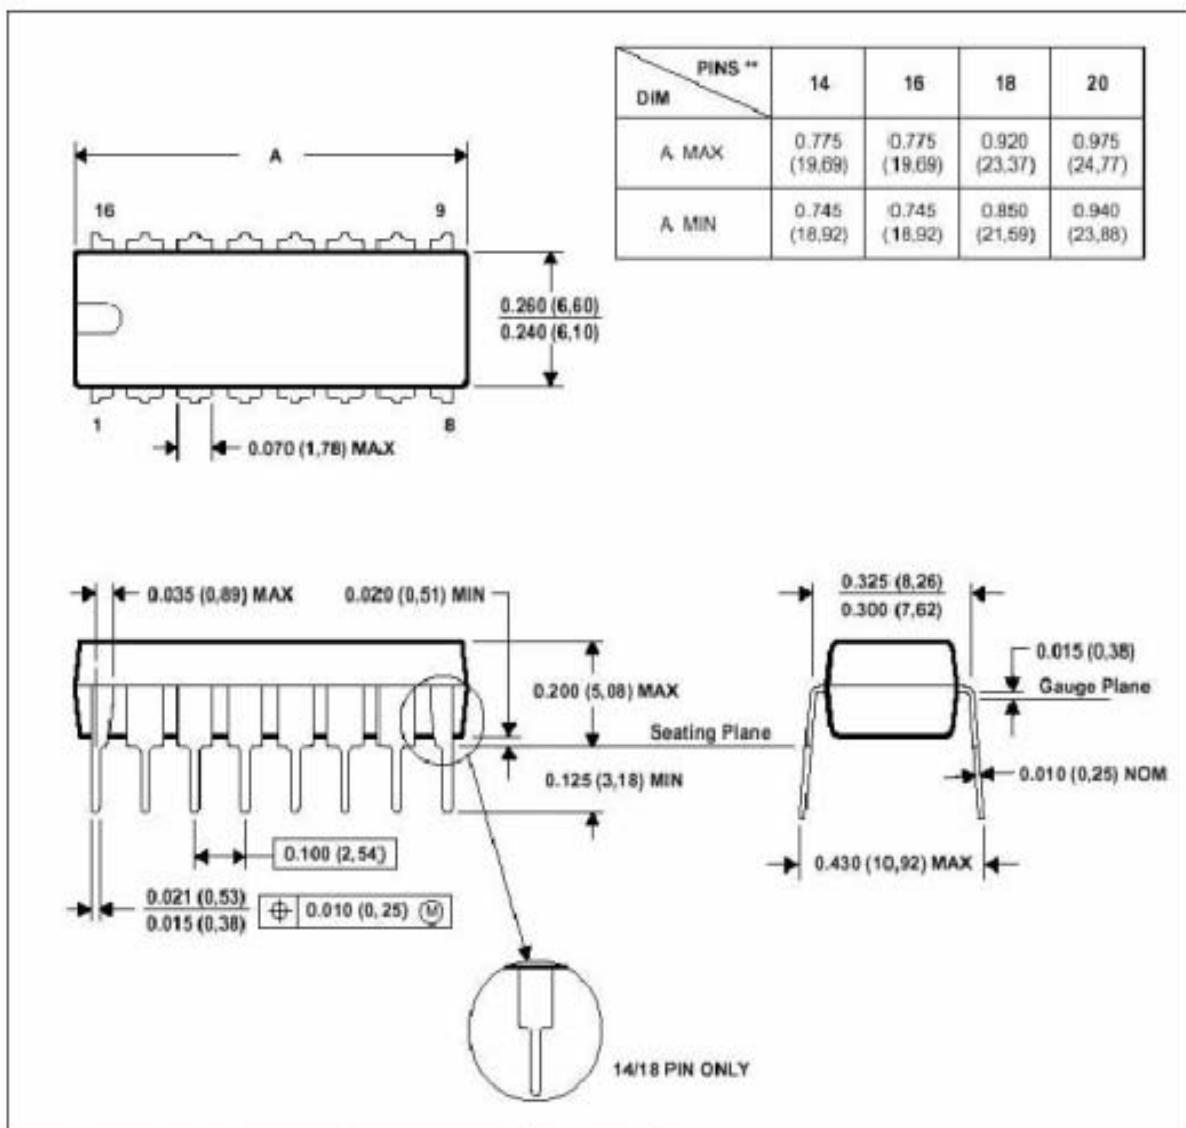

## 7. Reference Application Circuit:

8. In some application power system, adding an external resistor (R9) could reduce the peak value spike from the environments to pin 9 (REM) and avoid pin 9 (REM) damaged by the external noise.
