

Service Manual

Stereo Integrated Amplifier

Amplifier

SU-VX500

Color

(K) Black Type

Areas

Country Code	Area	Color
(E)	Continental Europe	(K)
(EB)	Great Britain	
(EG)	F.R. Germany and Italy	
(GC)	Asia, Latin America, Middle Near East and Africa	
(GN)	Oceania	

SPECIFICATIONS (DIN 45 500)

• MAIN AMP. SECTION (POWER AMP. DIRECT Input)

20 Hz - 20 kHz continuous power output	
both channels driven	2 x 50 W (8 Ω)
1 kHz continuous power output	
both channels driven (THD: 1%)	2x65 W (8 Ω) 2x90 W (4 Ω)
63 Hz ~ 12.5 kHz continuous power output	
both channels driven (THD: 0.7%)	2 x 60 W (8 Ω) 2 x 80 W (4 Ω)
Total harmonic distortion (Power Amp Direct Input)	
rated power at 20 Hz-20 kHz	0.007% (8 Ω)
half power at 20 Hz-20 kHz	0.005% (8 Ω)
Intermodulation distortion (SO Hz: 7 kHz = 4:1, SMPTE)	
rated power	0.007 % (8 Ω)
Residual hum and noise	0.2 mV
Damping factor	60 (8 Ω), 30 (4 Ω)
Headphones output level and Impedance	540 mV/330 Ω
Load Impedance	
A or B, BI-WIRING	4Ω-16Ω
A and B	8Ω-16Ω

PREAMP. SECTION

Input sensitivity and impedance	
PHONO MM	2.5 mV/47 kΩ
PHONO MC	170 μV/220 Ω
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT	150 mV/22 kΩ
POWER AMP DIRECT	1 V/18 kΩ
Phono maximum input voltage (1 kHz, RMS)	
MM	160 mV, IMF' 66
MC	12 mV, IMF' 66

S/N (rated power, 4 Ω)	
PHONO MM	78 dB (85 dB, IMF' 66)
PHONO MC	66 dB (S = 250 μV, 67 dB, IHF' 66)

POWER AMP DIRECT	97 dB (99 dB, IHF' 66)
S/N at ~26 dB power (4 Ω)	106 dB (115 dB, IHF' 66)
PHONO MM	76 dB
PHONO MC	66 dB
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT	84 dB
S/N at 50 mW power (4 Ω)	
PHONO MM	75 dB
PHONO MC	66 dB
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT	78 dB

Frequency response	RIAA standard curve
PHONO MM	±0.8 dB (30 Hz-15 kHz)
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT	
3Hz-100kHz (+0, -3dB)	
+0dB, -0.2dB (20Hz-20kHz)	
POWER AMP DIRECT	2 Hz-120 kHz (+0, -3 dB)
+0 dB, -0.2 dB (20 Hz-20 kHz)	

Tone controls	
BASS	50Hz, +10 dB, -10dB
TREBLE	20kHz +10 dB, -10 dB
Loudness control (volume at -30 dB)	50 Hz, +9 dB
Output voltage	
TAPE 1, TAPE 2/DAT REC OUT	150 mV

Technics

SU-VX500

<ul style="list-style-type: none"> • GENERAL 		Dimension (W x H x D)	430x 125x316 mm (16-15/16" x4-15/16" x 12-7/16")
Power consumption	530 W	Weight	8,1 kg (17,82 lb)
Power supply		Notes:	
• for Great Britain and Oceania		1. Specifications are subject to change without notice.	
• F.R. Germany, Italy and Continental Europe:		Weight and dimensions are approximate.	
AC 50/60 Hz, 230/240 V		2. Total harmonic distortion is measured by the digital spectrum analyzer.	
for Others:	AC 50/60 Hz, 110 V/127 V/220 V/240 V

DISASSEMBLY INSTRUCTIONS	7-10	CABINET PARTS LOCATION	25, 25
SCHEMATIC DIAGRAM	11-14	PACKAGING	28

I BEFORE REPAIR AND ADJUSTMENT

- (1) Turn off the power supply. Using a 10M 10 W resistor, shortcircuit both ends of power supply capacitors C001, C002, C705 and C706 in order to discharge the voltage.
- (2) Before turning on the power switch of the unit.
- Connect the voltage controller to the primary side.
 - Connect the AC ampere meter to the primary side or conned the DC voltage meter to the "aB" circuit of the secondary side.
 - Turn the VR of ICQ (VR451, VR452, VR501 and VH502) to minimum (counterclockwise).
 - Alter setting the output to zero of the voltage controller, turn on the power switch of the unit. And increase the output of voltage controller gradually. Then, check carefully whether the current value of primary side become more than following value or whether the DC voltage of secondary side is increasing slowly.
 - E. If the value of current is increasing unusually or the DC voltage is not increasing, lower the output level of voltage controller Immediately.
- The current value of the primary side at no signal. (Confirm the power supply voltage of each area and provided voltage of the unit.)

Power supply voltage		AC110V	AC120V	AC220V	AC230V	AC240V
Consumed current	50 Hz	250-540 mA	210-500 mA	90-370 mA	80-360 mA	70-350 mA

I PROTECTION CIRCUITRY

The protection circuitry of the amplifier may have operated if either of the following conditions is noticed:

- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated Impedance of the amplifier are used.

If this occurs, follow the procedure outlined below:

1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again.

Note:

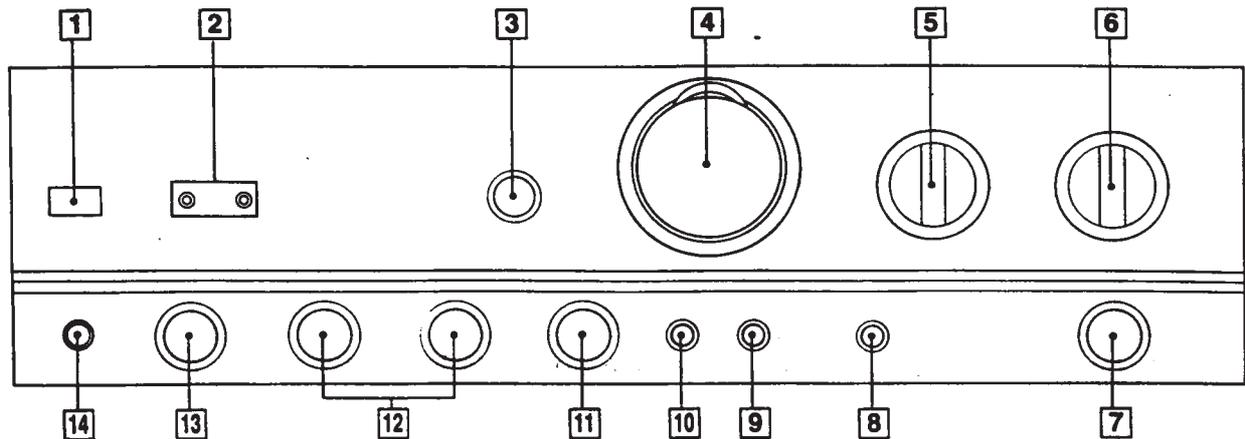

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

I ACCESSORY

- AC power supply cords
- <SFDAC02E03> For (E), (EG) areas.
- <SJA193> For (EB) area only.
- <RJA0004> For (GC) area only.
- <SJA173> For (GN) area only.

■ LOCATION OF CONTROLS

1 Power switch (POWER)

2 Operation indicators (AMPLIFIER OPERATION MONITOR)

These indicators illuminate to indicate the operating condition of this unit.

VOLTAGE CONTROL:

When the power is switched ON, this indicator illuminates when the unit is in the operation condition.

CURRENT DRIVE:

When the power is switched ON, this indicator illuminates after about 4 seconds when the unit is in the operation condition.

If an abnormal condition in the circuitry is detected, such as DC voltage appearing in the output, or a short-circuit of the positive (+) and negative (-) wires from the speaker terminals, the protection circuit functions and this indicator does not illuminate.

3 Power amplifier direct switch (POWER AMP DIRECT)

This switch is used to listen to the sound from a component connected to the "POWER AMP DIRECT" terminals.

When this switch is pressed inward to the "ON" position, a superior level of tone quality can be obtained, because the signals from the component connected to the "POWER AMP DIRECT" terminals are sent directly to the volume control and power amp section of this unit. The mode selector, loudness switch, balance control and tone control circuit are bypassed.

4 Volume control/Indicator (VOLUME)

There are two types of volume scale indications: one for when or the power amplifier direct switch is OFF, and one for when it is ON (Indicator will illuminate.).

5 Recording output selector (REC SELECTOR)

This selector is used to select the sound source to be recorded by the connected tape deck 1 and/or tape deck 2 (or DAT).

6 Input selector (INPUT SELECTOR)

This selector is used to select the sound source to be heard, such as a disc, radio broadcast, etc.

7 Phono cartridge selector (PHONO SELECTOR)

This selector should be set to the position which corresponds to the type of cartridge used on the turntable.

8 Mode selector (MODE)

This selector is used to select stereo or monaural operation.

9 Loudness switch (LOUDNESS)

This switch is used when listening to music at a low volume level. Auditory perception of sound in the low frequency range falls off at low volume, but when the switch is set to the "ON" position, this deficiency is compensated for, so that the full impact of the musical performance can be enjoyed.

10 Tone control switch (TONE CONTROL)

This switch is used to set the tone control circuit (bass, treble) on or defeat (off).

11 Balance control (BALANCE)

This control is used to adjust the left/right volume balance.

12 Tone controls (BASS/TREBLE)

The bass control is used to adjust the low-frequency sound range, and the treble control is used to adjust the high-frequency sound range.

13 Speaker selector (SPEAKERS)

This selector is used to select the speaker systems to be used.

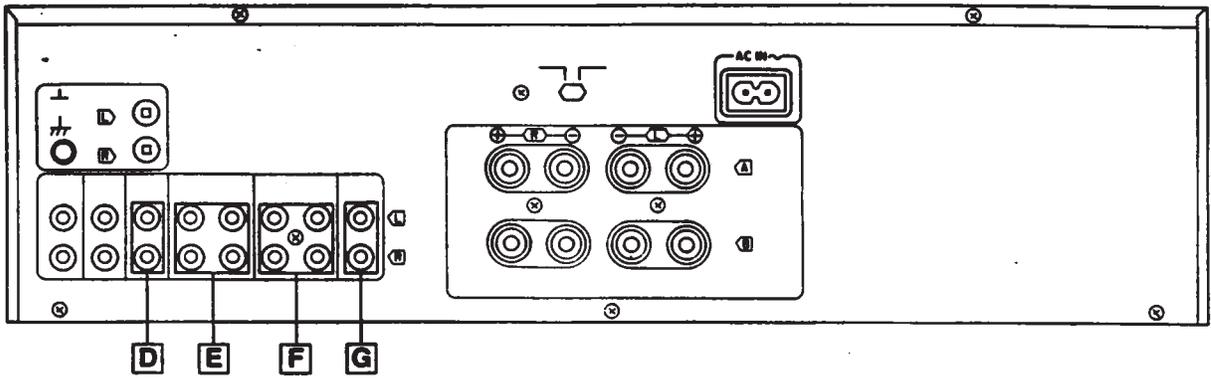

OFF: No sound will be heard from the speaker systems.

A: Sound can be heard from the speaker systems connected to the "A" terminals.

B: Sound can be heard from the speaker systems connected to the "B" terminals.

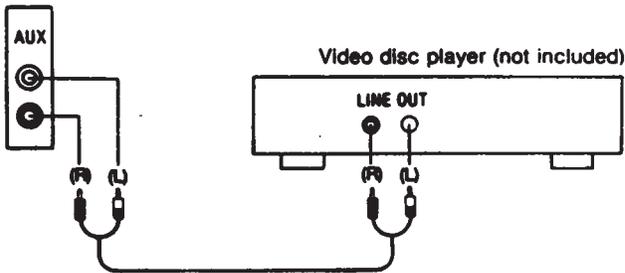

A+B/BI-WIRING: Sound can be heard simultaneously from the speaker systems connected to the "A" terminals and the "B" terminals. Or, if bi-wired speaker systems are connected, sound can be heard from them.

14 Headphones jack (PHONES)

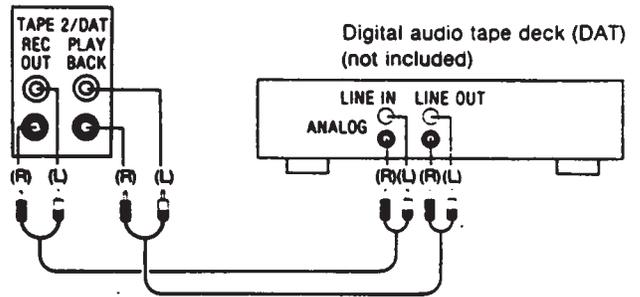

D "AUX" terminals

Connect a component such as a video disc player (audio only connectable), etc.

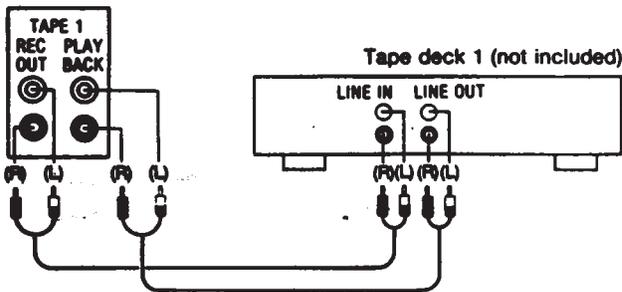

F "TAPE 2/DAT" terminals

Connect a second tape deck or a digital audio tape deck (DAT).

E "TAPE 1" terminals

Connect a first tape deck.

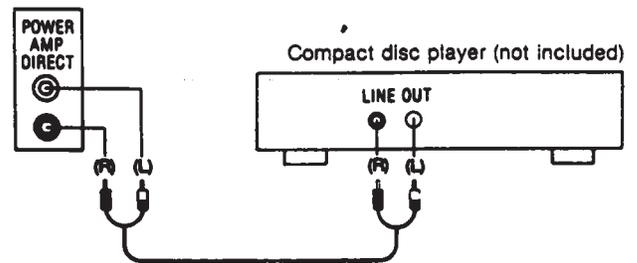

G "POWER AMP DIRECT" terminals

Connect a compact disc player.

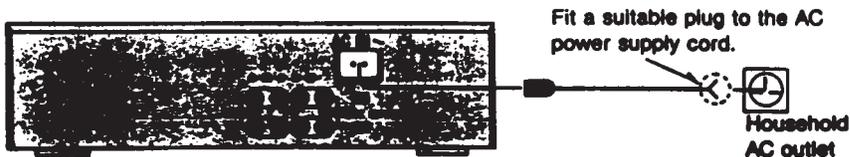

A superior level of tone quality can be obtained, because the signal from these terminals are sent directly to the volume control and power amp section of this unit.

The sounds from a component connected to these terminals cannot be recorded.

To connect the AC power supply cord (included)

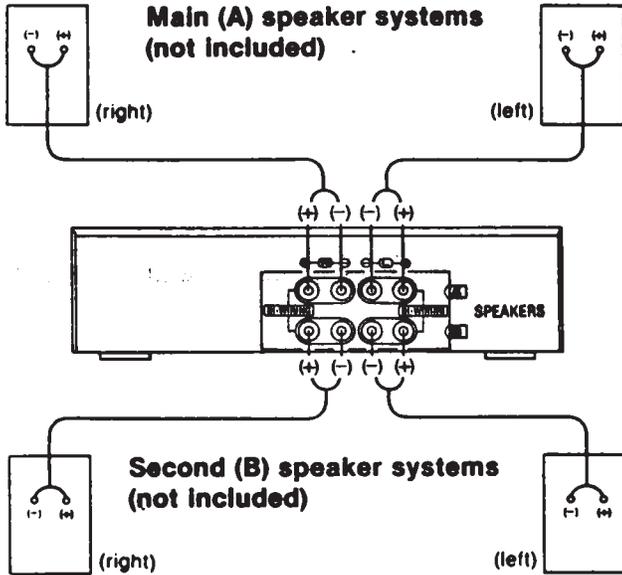

Connect the AC power supply cord (included) after all other cables and cords are connected.

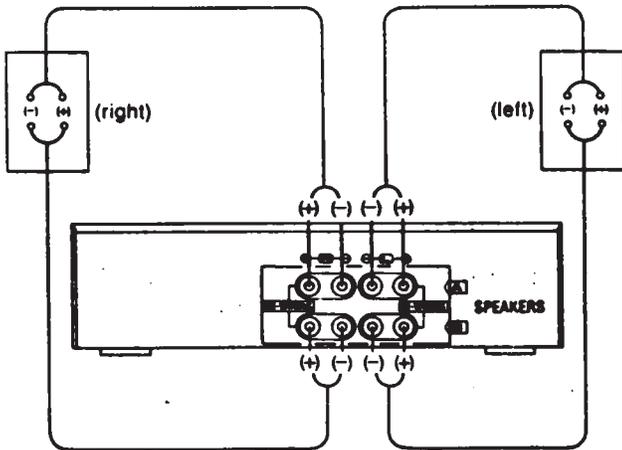

- 1
- 2
- 3
- 4
- 5
- 6
- 7

Connection to speaker systems

To connect main and/or second speaker systems

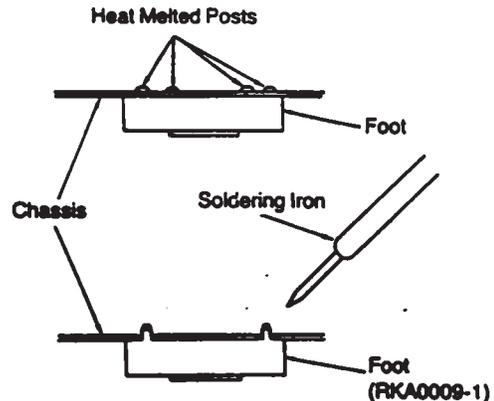

To connect bi-wired speaker systems

Note: Connect only bi-wired speaker systems in this way.

• Replacement of the Foot.

1. Remove the 4 heat melted posts on the chassis with a pair of nippers or similar tool.
2. To replace the foot (RKA0009-1) on the chassis, melt the 4 posts with a soldering iron.

One pair of speaker systems can be connected to the "A" terminals of this unit and one pair to the "B" terminals, or only one pair of bi-wired speaker systems can be connected to all terminals.

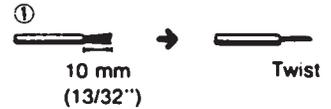

Make connections to each speaker system by using speaker cords (not included).

■ Load Impedance

- When only the "A" or only the "B" terminals are used: 4-16 ohms
- When both the "A" and the "B" terminals are used simultaneously: 8-16 ohms
- When bi-wired speaker systems are used: 4-16 ohms

■ To connect cords to terminals

- ① Strip off the outer covering, and twist the center conductor.

- ② Turn completely to the left.

- ③ Insert the wire and turn completely to the right. Pull the cord to assure a proper connection.

Note: Be sure to only connect positive (+) cords to positive (+) terminals, and negative (-) cords to negative (-) terminals.

Note:

To prevent damage to circuitry, never short-circuit the plus (+) and minus (-) speaker wires.

■ Bi-wiring

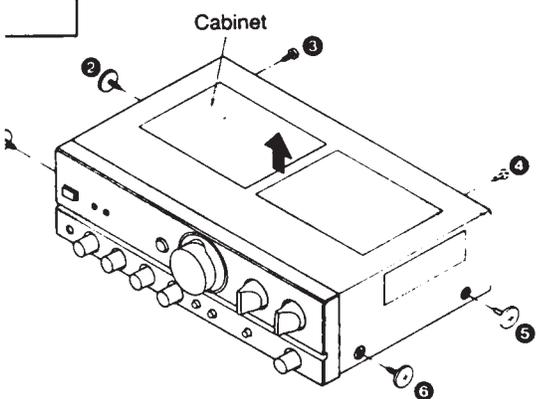

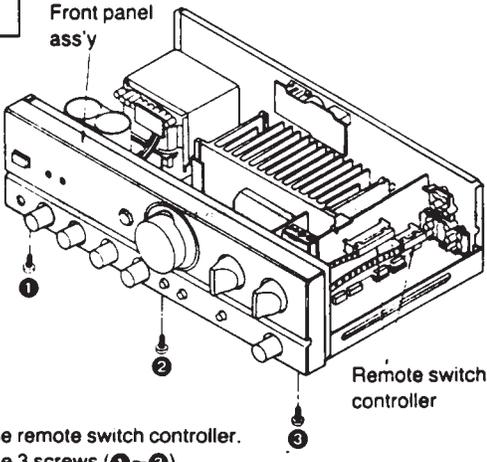

The treble range and the bass range of the speaker systems are connected to the speaker terminals of the amplifier by using two speaker connection wires separately for each.

As a result of making connections in this way, sound can be reproduced with much greater nuance and detail, with the feelings of air oscillation and deepness of sound provided by an input source that suppresses reciprocal band-range interference. (Refer to the operating instructions of the speaker system.)

ASSEMBLY INSTRUCTIONS

CAUTION SERVICER

Some components may have sharp edges. Be careful when disassembling and servicing.

Ref. No. 2	Removal of the cabinet	Ref. No. 2	Removal of the front panel ass'y
Procedure 1→2	 <p>Remove the 6 screws (1~6).</p>	Procedure 1→2	 <p>1. Remove the remote switch controller. 2. Remove the 3 screws (1~3).</p>

Removal of the remote switch controller

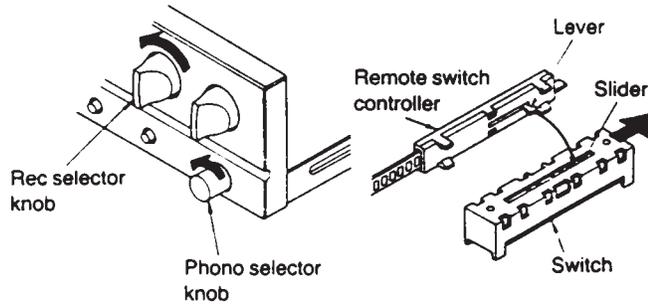

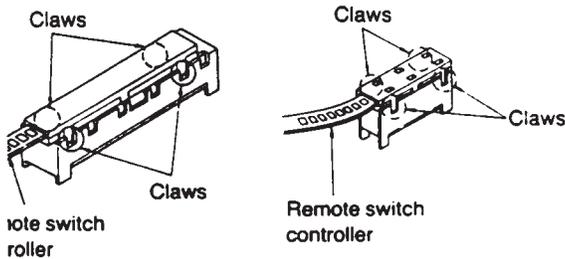

Remove the 4 claws.

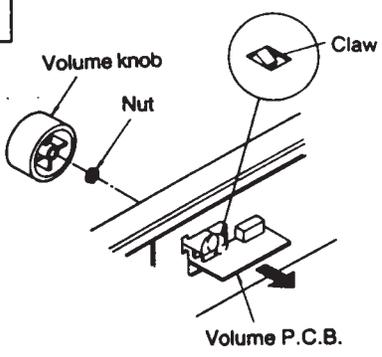

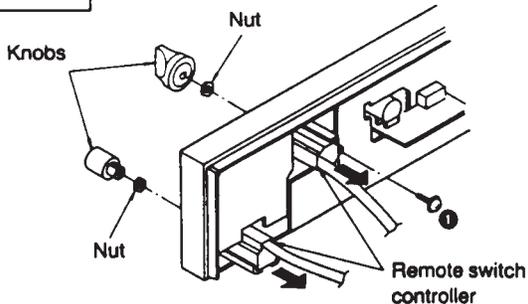

102 (REC SELECTOR)

S103 (PHONO SELECTOR)

Replacing of the remote switch controller

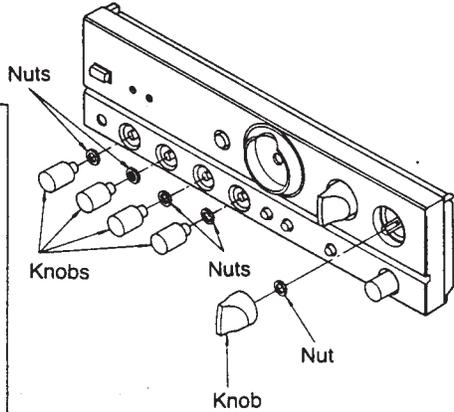

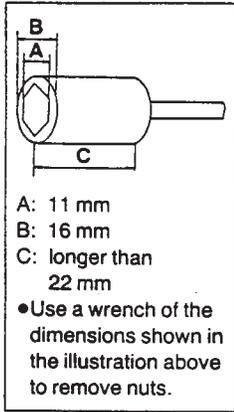

1. Turn the selector knobs to the arrows.
2. Put the switch slider of switch to end and put in the remote switch controller.

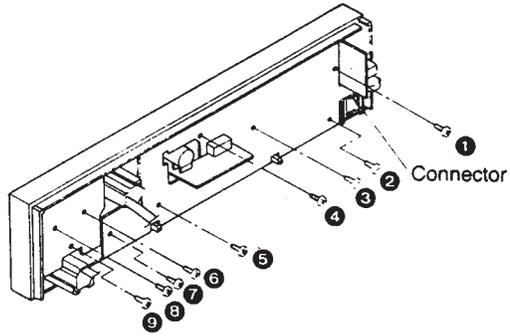

Ref. No. 3	Removal of the volume P.C.B.	Ref. No. 4	Removal of the remote switch controller
Procedure 2→3	 <p>1. Turn the volume knob. 2. Remove the nut. 3. Remove the 1 claw. 4. Remove the volume P.C.B. in the direction of arrow.</p>	Procedure 1→2→4	 <p>1. Pull out the 2 knobs. 2. Remove the 2 nuts. 3. Remove the 1 screw (1). 4. Remove the remote switch controller in the direction of arrow.</p>

Ref. No. 5 **Removal of the operation P.C.B. and input selector P.C.B.**

Procedure
1→2→3→5

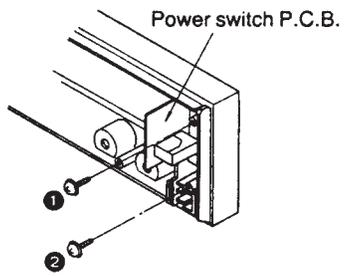

1. Pull out the 5 knobs.
2. Remove the 5 nut.

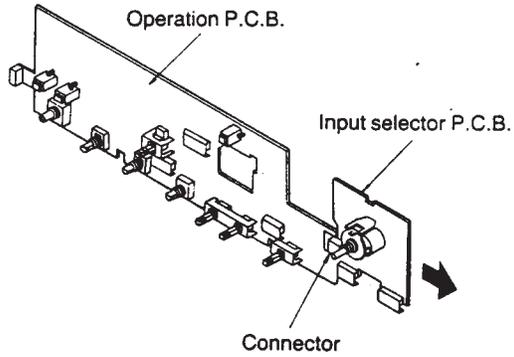

3. Remove the 9 screws (①~⑨).
4. Remove the 1 connector (CP501).

Ref. No. 6 **Removal of the power switch P.C.B.**

Procedure
1→2→3→5→6

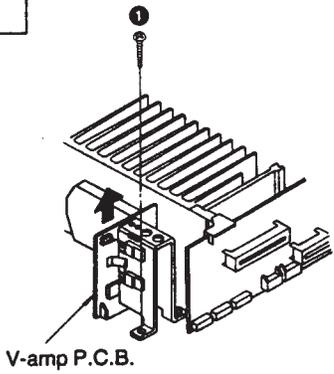

- Remove the 2 screws (①, ②)

5. Remove the input selector P.C.B. in the direction of arrow.

Ref. No. 7 **Removal of the V-amp P.C.B.**

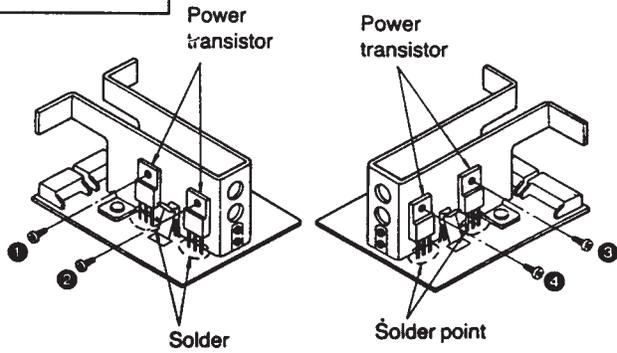

Procedure
1→7

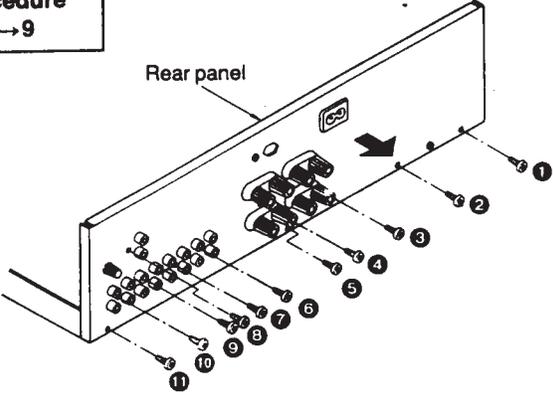

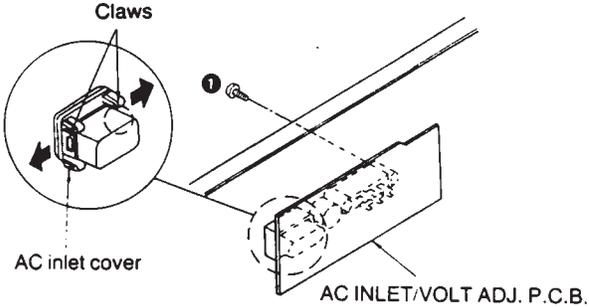

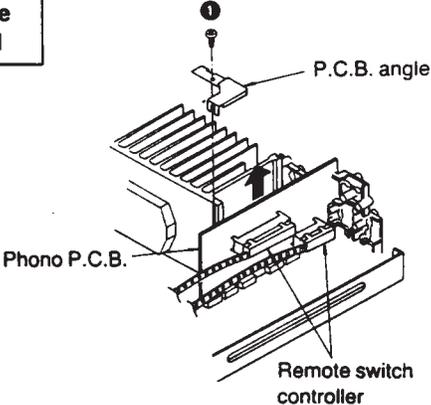

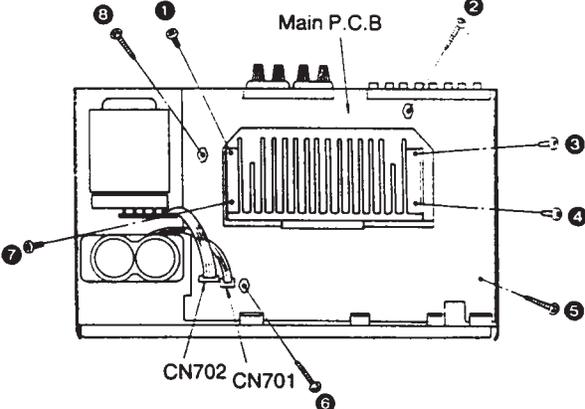

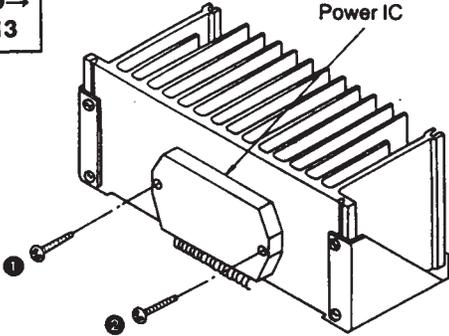

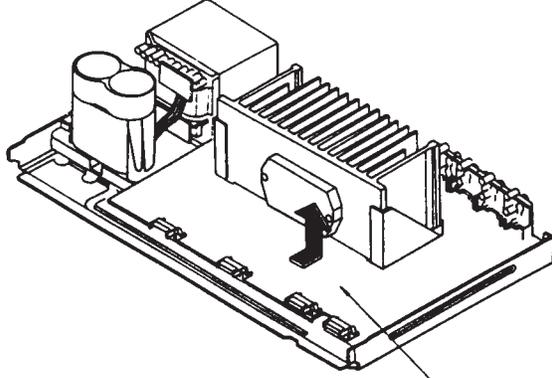

1. Remove the 1 screw (①).
2. Remove the V-amp P.C.B. in the direction of arrow.

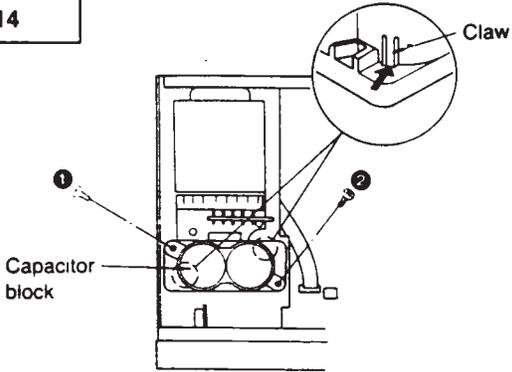

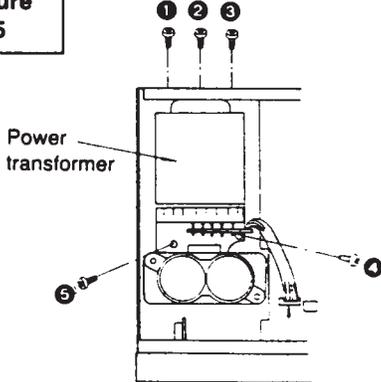

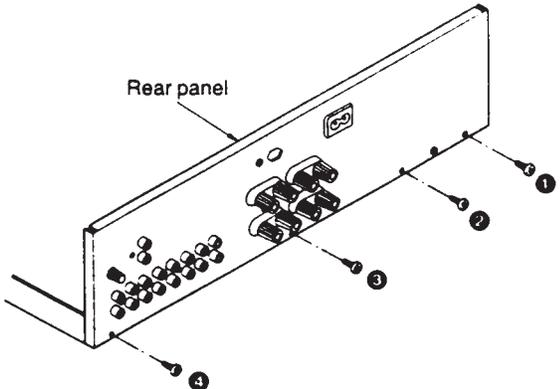

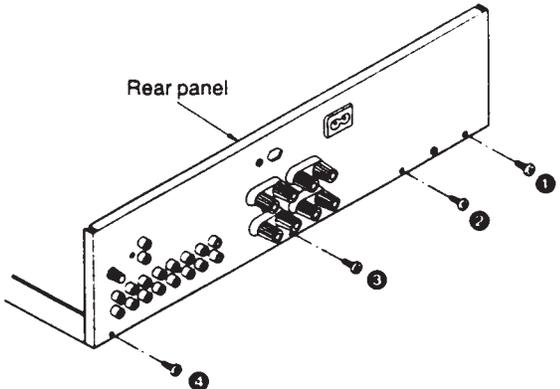

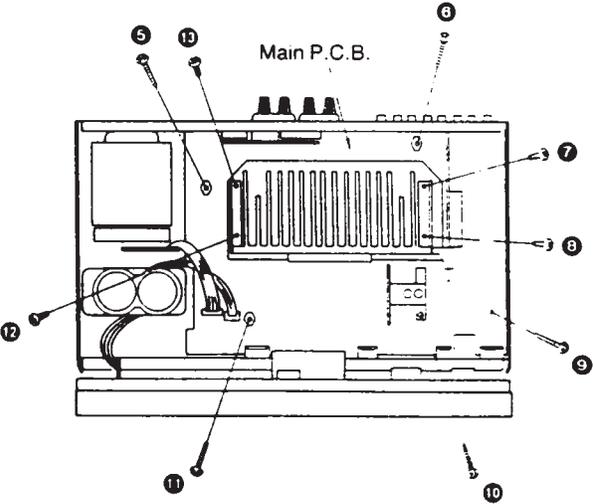

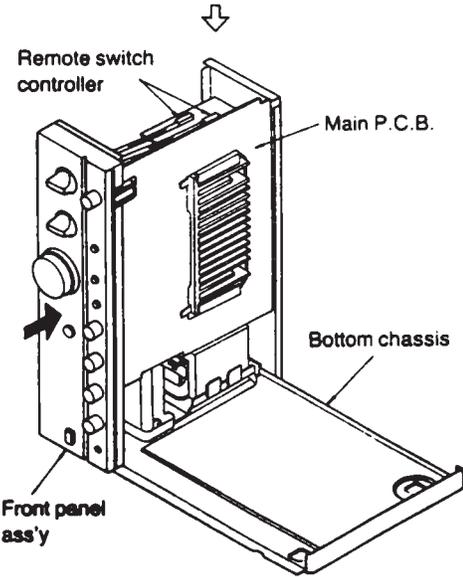

Ref. No. 8 **Removal of the power transistor**

Procedure
1→7→8

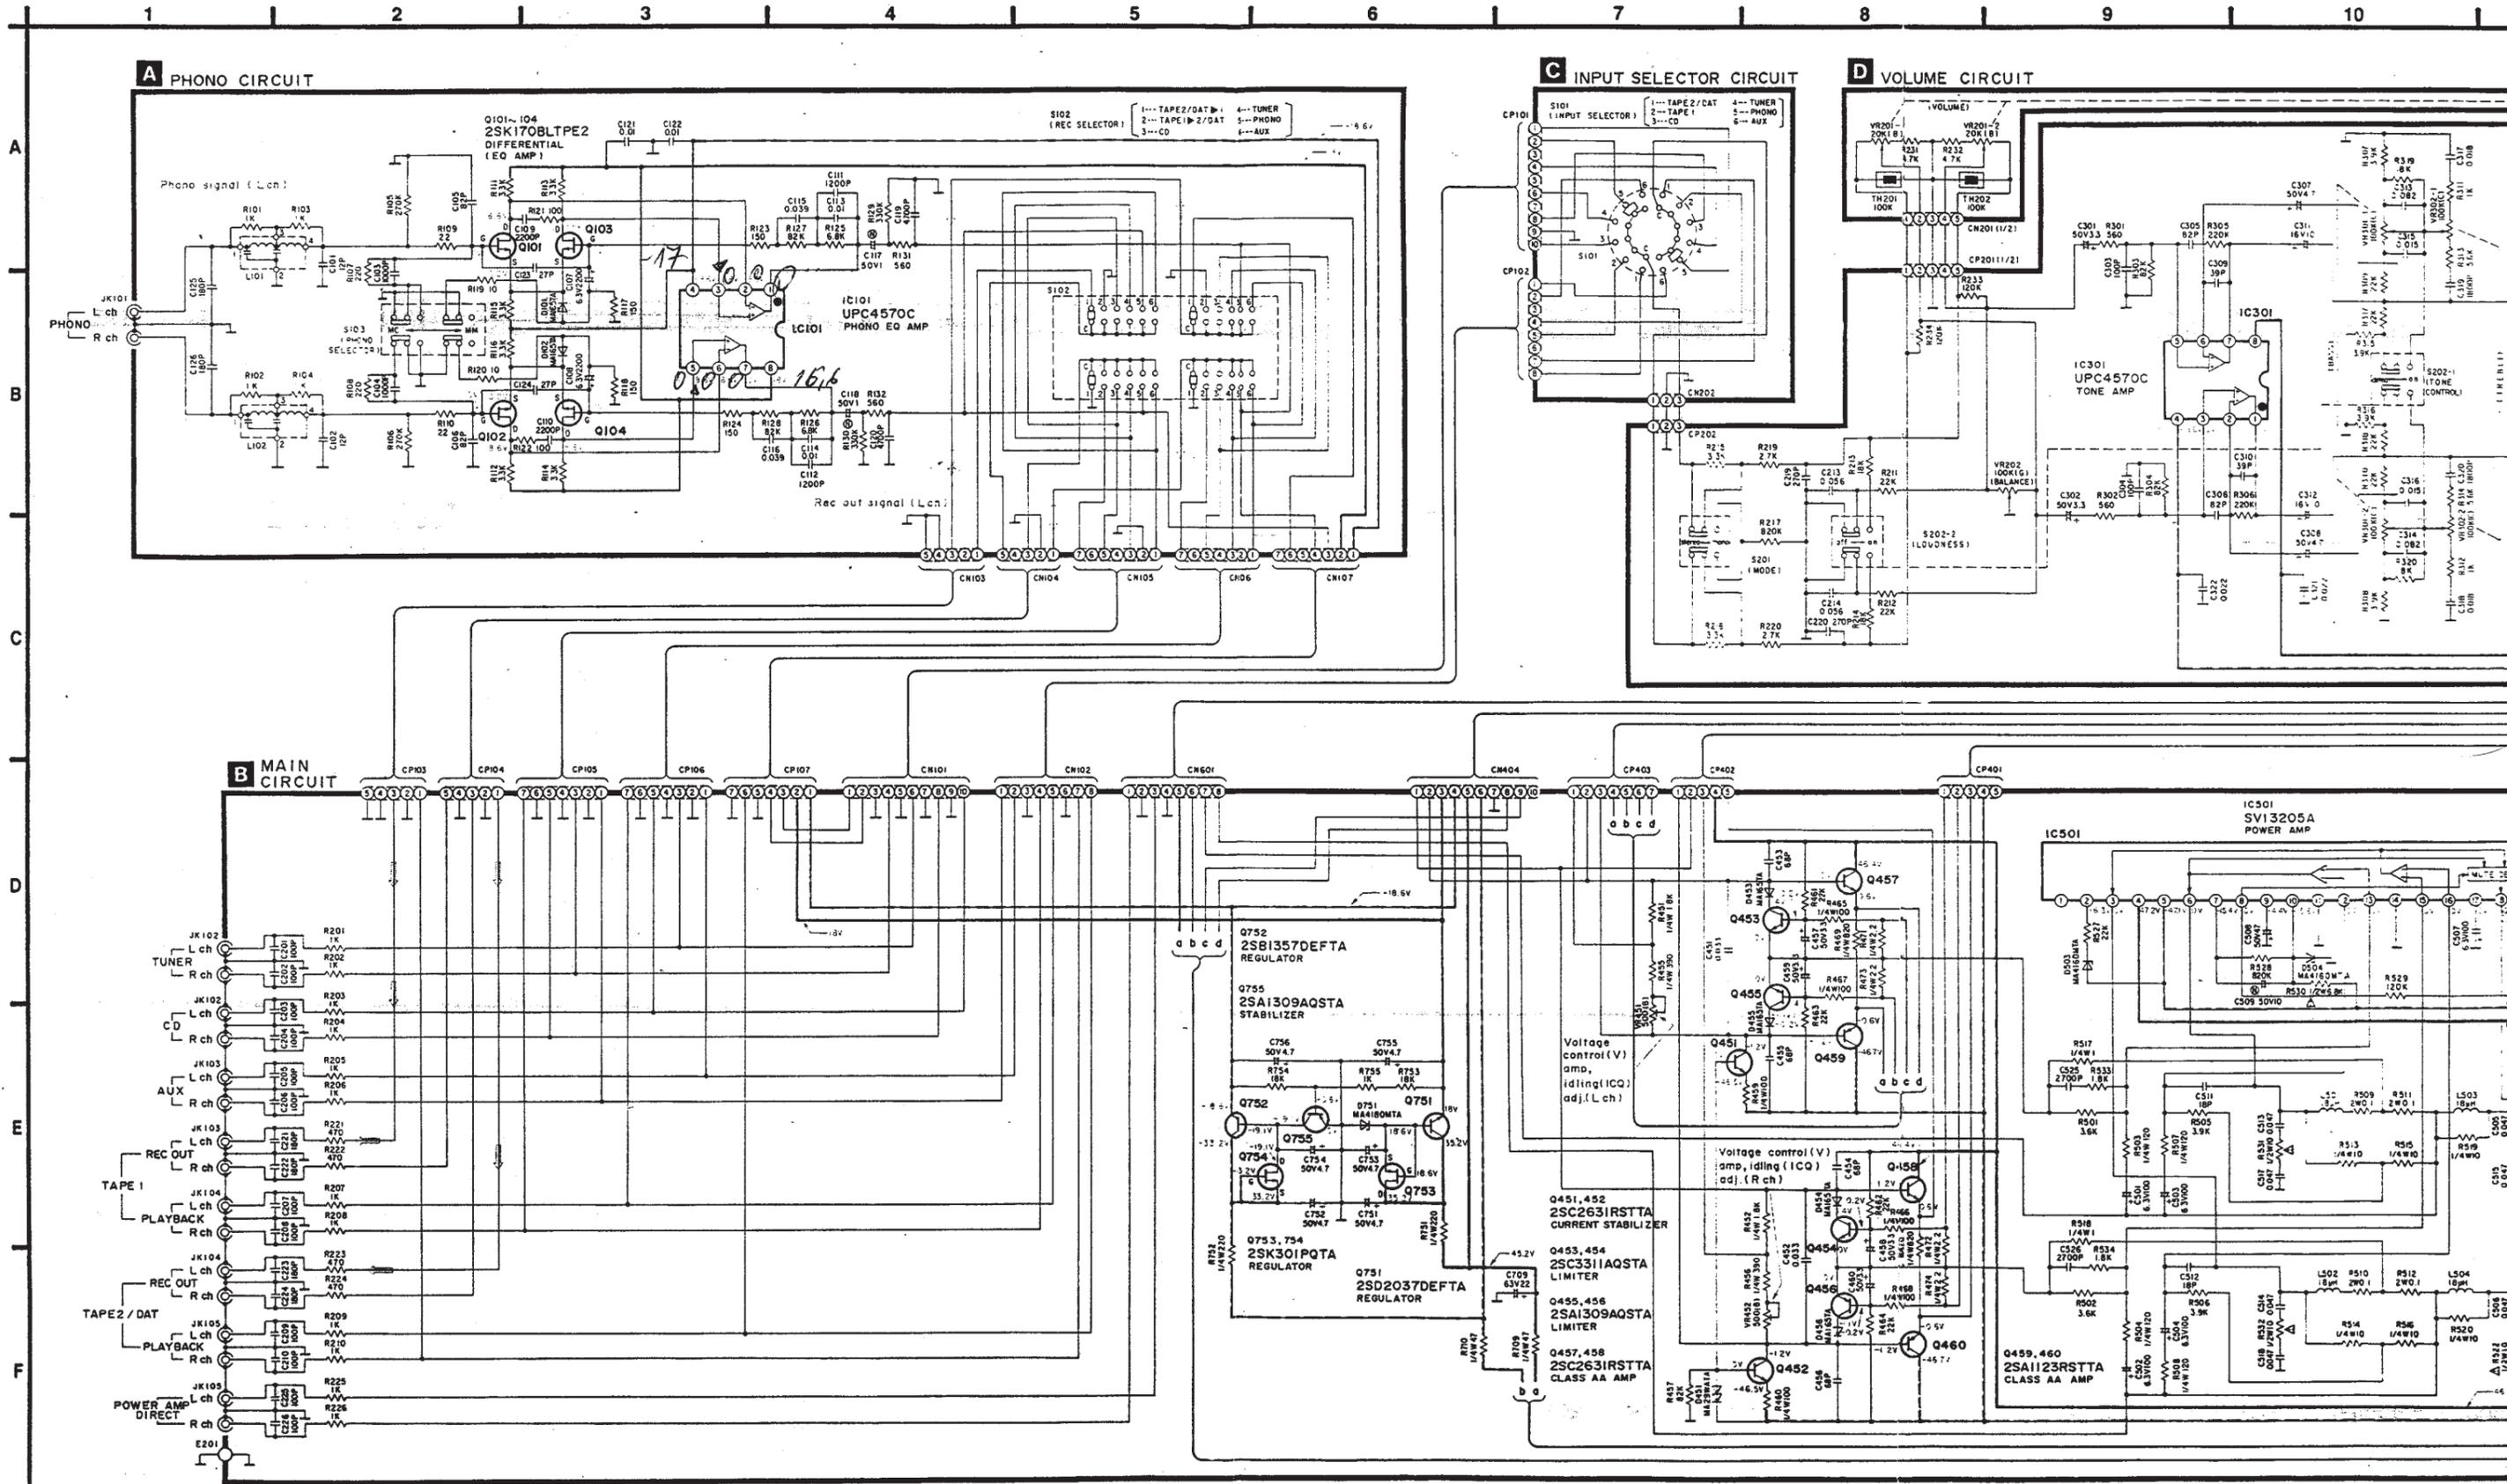

1. Unsolder the power transistor.
 2. Remove the 4 screws (①~④).
- When mounting power transistor, apply silicon thermal compound (RFKX0002) to the rear of the power transistor.

SCHEMATIC DIAGRAM (Parts list on pages 22-24).

E OPERATION CIRCUIT

(This schematic diagram may be modified at any time with the development of new technology)

Notes:

- S1 : Power (POWER) switch in "ON" position.
- S2 : Voltage select (VOLTAGE SELECTOR) switch in "240 V" position.... (E), (EE)
Voltage select (VOLTAGE SELECTOR) switch in "220 V" position.... (GC)
- S101 : Input select (INPUT SELECTOR) switch in "PHONO" position.
- S102 : Recording output select (REC SELECTOR) switch in "TAPE2/DAT ▶ 1" position.
- S103 : Phono select (PHONO SELECTOR) switch in "MC" position.
- S201 : Mode select (MODE) switch in "STEREO" position.
- S202 : S202-1; Tone control (TONE CONTROL) switch in "DEFEAT" position.
(off...DEFEAT, on...ON)
S202-2; Loudness (LOUDNESS) switch in "OFF" position.
- S203 : Power amplifier direct (POWER AMP DIRECT) switch in "OFF" position.
- S501 : Speaker select (SPEAKERS) switch in "OFF" position.

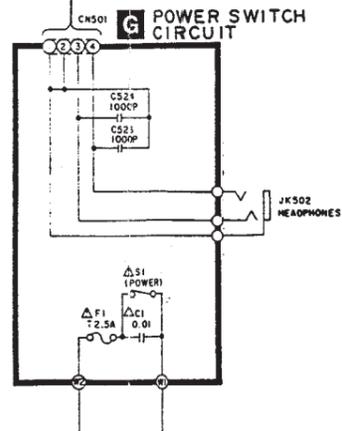

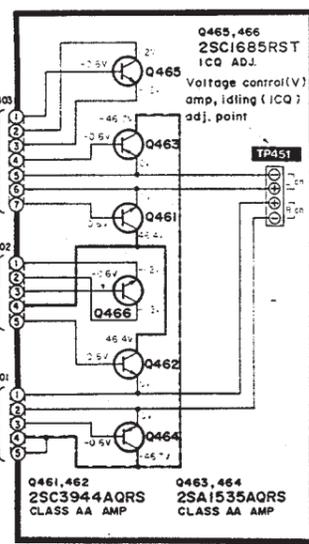

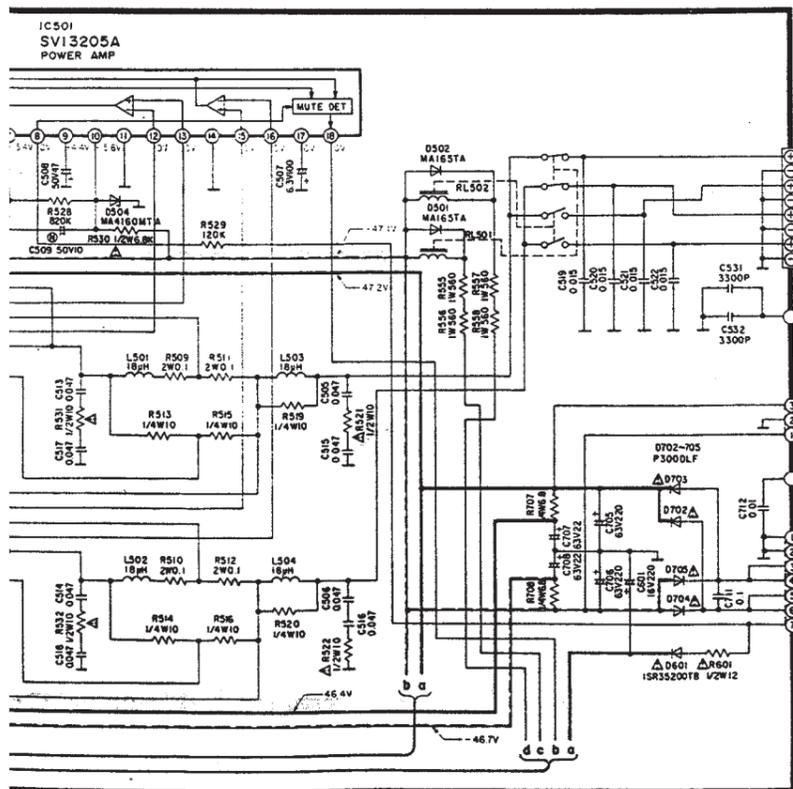

- : Positive voltage line.
- - - : Negative voltage line.
- ▨ : Phono signal line. (Lch)
- ➔ : Recording output signal line. (Lch)

•Indicated voltage values are the standard values for the unit measured by the DC electronic tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some the voltage values, depending on the internal impedance of the DC circuit tester.

•Important safety notice:
Components identified by Δ mark have special characteristics important for safety. When repairing any of these components, use only manufacturer's specified parts.

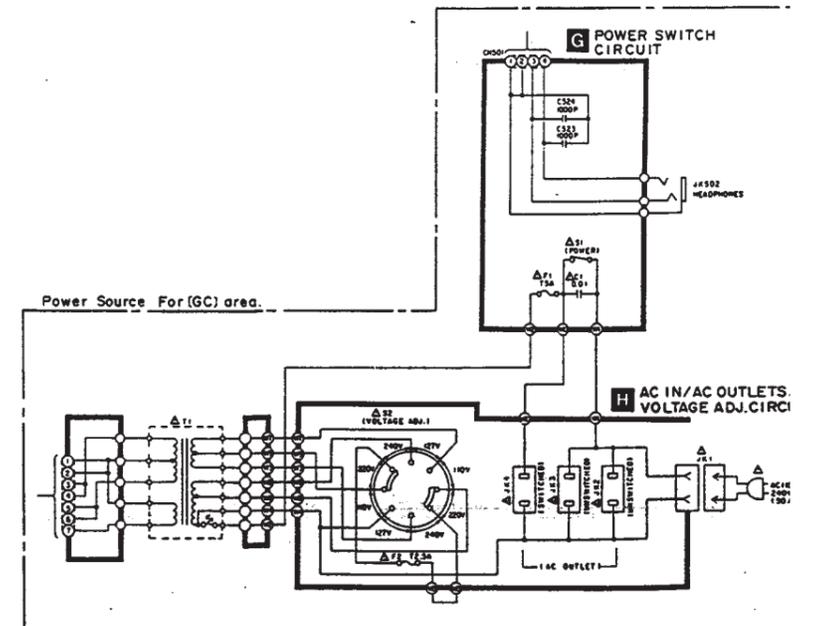

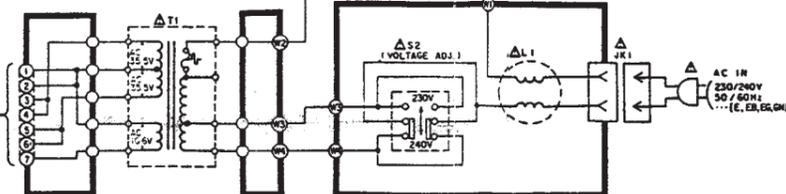

Caution!

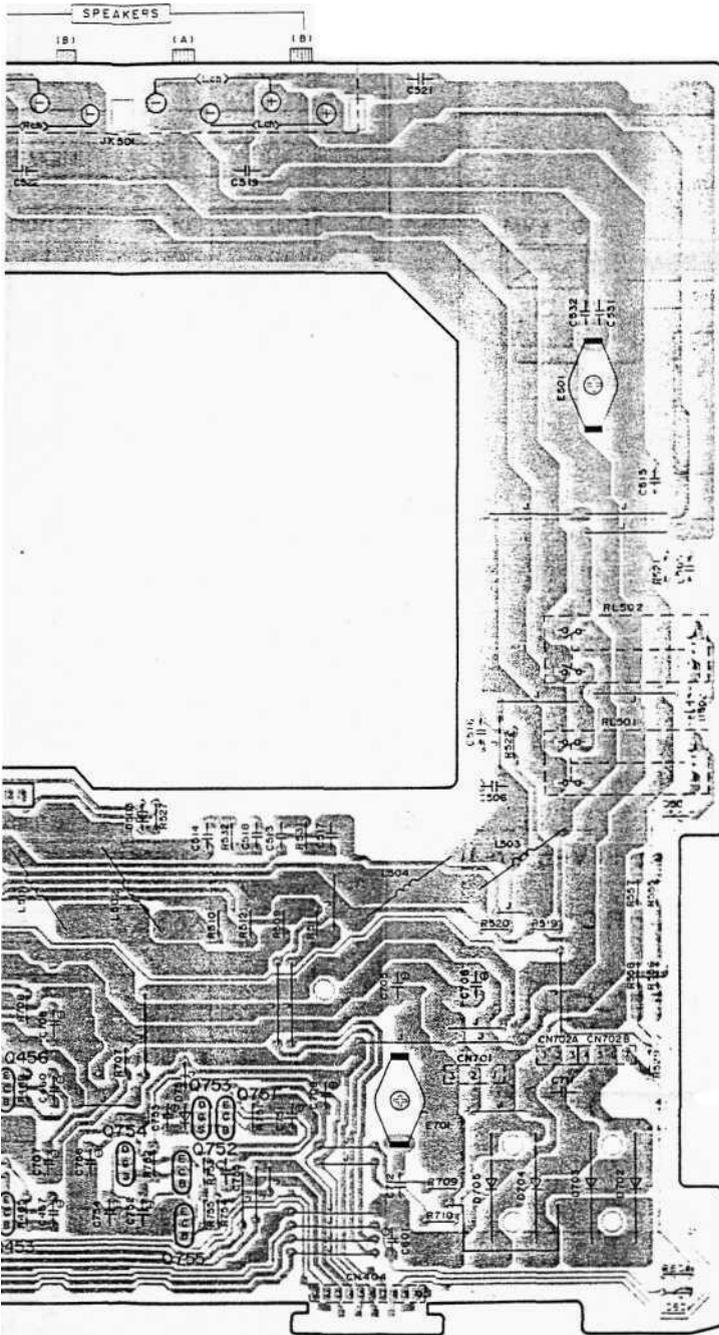

IC and LSI are sensitive to static electricity.
Secondary trouble can be prevented by taking care during repair.
Cover the parts boxes made of plastics with aluminum foil.
Ground the soldering iron.
Put a conductive mat on the work table.
Do not touch the legs of IC or LSI with the fingers directly.

■ MEASUREMENTS AND ADJUSTMENTS

● ADJUSTMENT

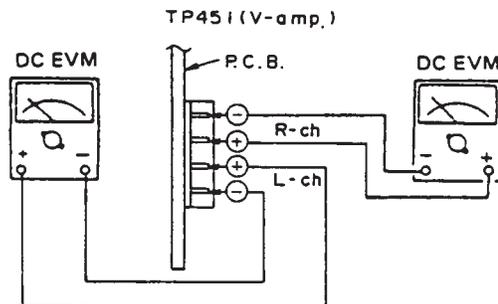

Control positions and equipment used.

- Volume knob ∞ (Minimum)
- Speaker selector off

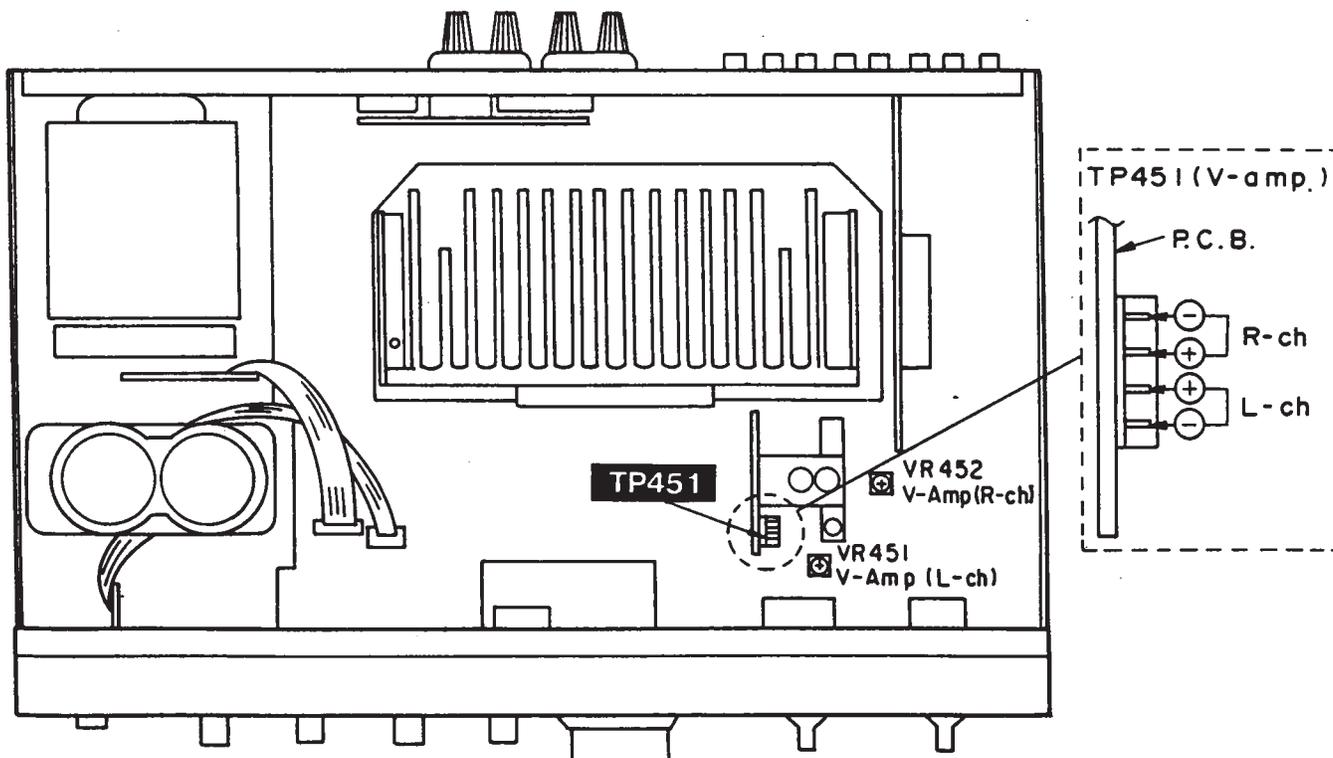

● AC and DC electronic voltmeter (EVM)

(1) VOLTAGE CONTROL (V) AMP. IDLING (ICQ) ADJUSTMENT

1. Test equipment connection is shown in figure. (Connect the DC EVM on both channels.)
 2. Completely turn the (V) amp. adjusting volumes (VR451, VR452) counter-clockwise.
 3. Turn ON the set when it is cold, and about 5 ~ 7 sec. later, adjust VR451 and VR452 so that the voltage is 25mV.
- Also, check that the voltage is 25 ~ 30mV (standard: 27mV) after lapse of 10 ~ 15 minutes. (Below 50mV after lapse of 20min.).

● ADJUSTMENT POINTS

REPLACEMENT PARTS LIST

Notes : * Important safety notice:

Components identified by A mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.

* The parenthesized indications in the Remarks columns specify the areas. (Refer to the cover page for area.) Parts without these indications can be used for all areas.
