## Active Subwoofer System

### SB-WA870EB SB-WA870EG

#### Colour

(S)...Silver Type

## Specification

### n Active subwoofer

Type	1 way, 1 speaker system (Bass reflex)
Speaker unit	Impedance 4 Ω
Woofer	20 cm Cone type
Output sound pressure	84 dB/W (1.0 m)
Frequency range	34 Hz-220 Hz (-16 dB) 38 Hz-190 Hz (-10 dB)
Dimensions (W x H x D)	248 x 417 x 476.6 mm
Mass	16.4 kg

### Notes :

1. Specifications are subject to change without notice.
2. Mass and dimensions are approximate.

SB-HT870P-S consists of :

SB-PF921P-S x 2, SB-PS921P-S x 2 and SB-PC920P-S x 1

n System : SC-HT870 (E)

Music Center: SA-HT870 (E)

Satellite Speakers: SB-HT870 (P)

Active Subwoofer: SB-WA870 (EG)

### n General

Power consumption	390V
Power supply	
Continental Europe and Russia	AC 230V, 50Hz
The United Kingdom, Australia and N.Z.	AC 230V-240V, 50Hz
Power consumption in standby mode	0.7 W

n System : SC-HT870 (EB)

Music Center: SA-HT870 (EB)

Satellite Speakers: SB-HT870 (P)

Active Subwoofer: SB-WA870 (EB)

n System : SC-HT870 (EG)

Music Center: SA-HT870 (EG)

Satellite Speakers: SB-HT870 (P)

Active Subwoofer: SB-WA870 (EG)

### ⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

# 1 Safety Precautions

## 1.1. GENERAL GUIDELINES

- 1 . When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

### 1.1.1. LEAKAGE CURRENT COLD CHECK

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between  $1M\Omega$  and  $5.2\Omega$ .  
When the exposed metal does not have a return path to the chassis, the reading must be  $\infty$  .

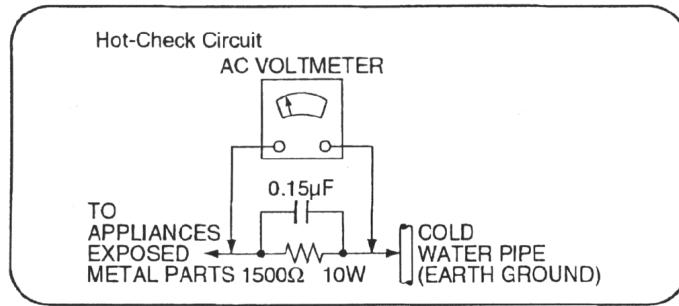

Fig. 1

### 1.1.2. LEAKAGE CURRENT HOT CHECK (See Figure 1.)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a  $1.5k\Omega$ , 10 watts resistor, in parallel with a  $0.15\mu F$  capacitors, between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in Figure 1.
3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed 0.75 volts RMS. A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed 1/2 milliamp. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

## 2 Handling the Lead-free Solder

### 2.1. About lead free solder (PbF)

#### **Distinction of PbF P.C.B. :**

P.C.B.s (manufactured) using lead free solder will have a PbF stamp on the P.C.B.

#### **Caution:**

- Pb free solder has a higher melting point than standard solder; Typically the melting point is 50 - 70°F (30 - 40°C) higher. Please use a high temperature soldering iron. In case of the soldering iron with temperature control, please set it to  $700 \pm 20^{\circ}\text{F}$  ( $370 \pm 10^{\circ}\text{C}$ ).
- Pb free solder will tend to splash when heated too high (about 1100°F/600°C).
- When soldering or unsoldering, please completely remove all of the solder on the pins or solder area, and be sure to heat the soldering points with the Pb free solder until it melts enough.

## 3 Before Repair and Adjustment

Disconnect AC power, discharge Power Supply Capacitors C601, C602, C603, C604 through a  $10 \Omega$ , 1 W resistor to ground.

DO NOT SHORT-CIRCUIT DIRECTLY (with a screwdriver blade, for instance), as this may destroy solid state devices.

After repairs are completed, restore power gradually using a variac, to avoid overcurrent.

Current consumption at AC 230V, 50Hz in NO SIGNAL mode should be ~1000 mA (EG ONLY).

Current consumption at AC 240V, 50Hz in NO SIGNAL mode should be ~1000 mA (EB ONLY).

## 4 Protection Circuitry

The protection circuitry may have operated if either of the following conditions are noticed:

- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.

If this occurs, follow the procedure outlined below:

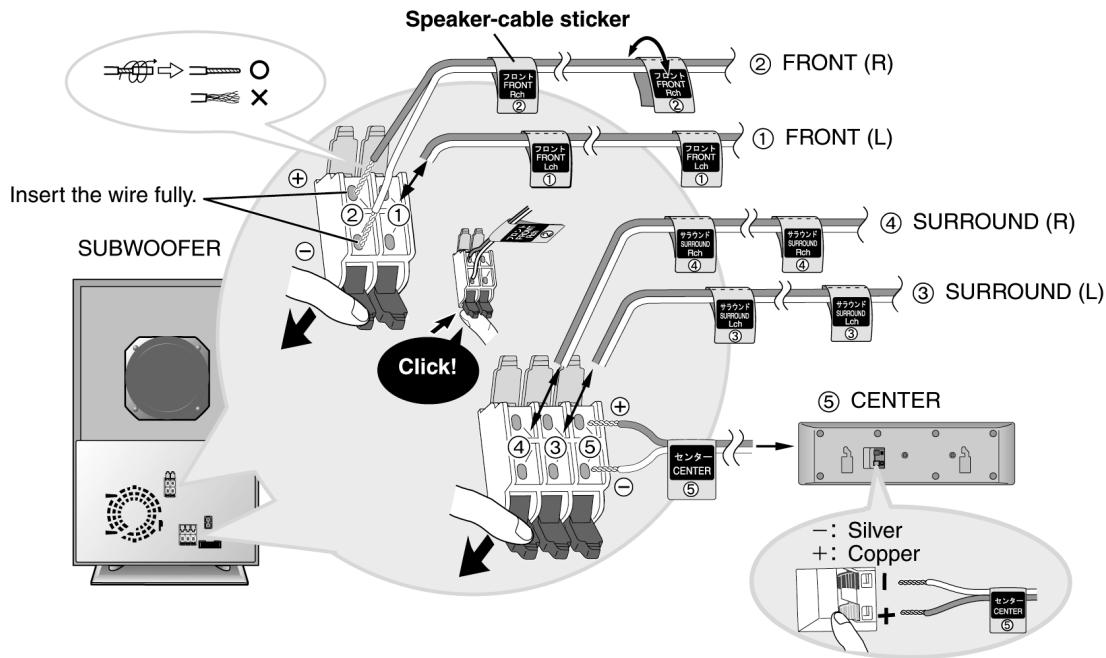

1. Turn off the power.
2. Determine the cause of the problem and correct it.
3. Turn on the power once again after one minute.

#### **Note :**

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

## 5 Connection of the Speaker Cables

- Be sure to connect speaker cables before connecting the AC power supply cord.
  - The load impedance of any speaker used with this unit must be  $4\Omega$ .
  - Be sure to connect the cable from the right speaker to the right terminal and the cable from the left speaker to the left terminal.
1. Strip off the outer covering, and twist the center conductor. Make sure the bare ends of the wires are not unravelled. (If they are, twist them tight again.)
  2. Insert the wire to the rear panel of the unit and close the lever.

### Notes :

- To prevent damage to circuitry, never short-circuit positive (+) and negative (-) speaker wires.
- Be sure to connect only positive (Copper) wires to positive (+) terminals and negative (Silver) wires to negative (-) terminals.

# 6 Disassembly Procedure

## "ATTENTION SERVICER"

Some chassis components may have sharp edges.

Be careful when disassembling and servicing.

1. This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
2. For reassembly after operation checks or replacement, reverse the respective procedures.  
Special reassembly procedures are described only when required.
3. Select items from the following index when checks or replacement are required.

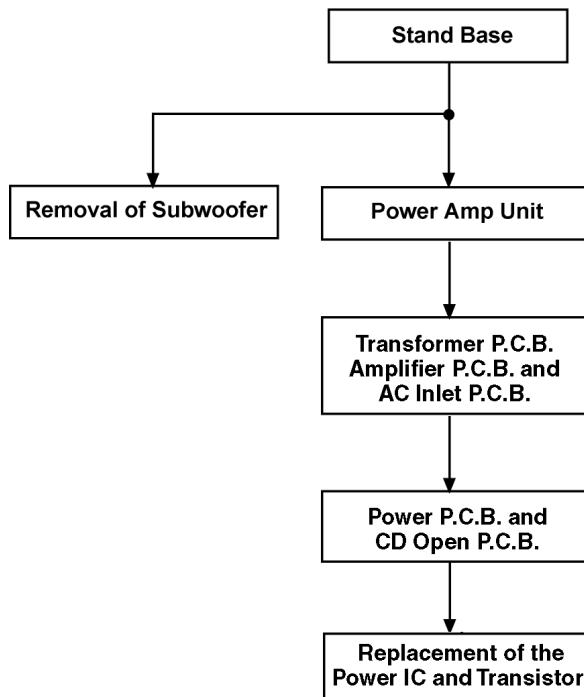

## Contents

- Disassembly of the Speaker Unit
- Main Component Replacement Procedures

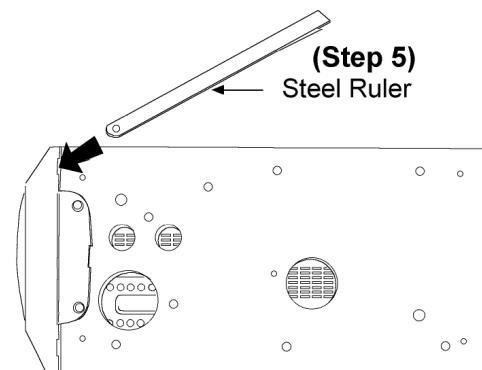

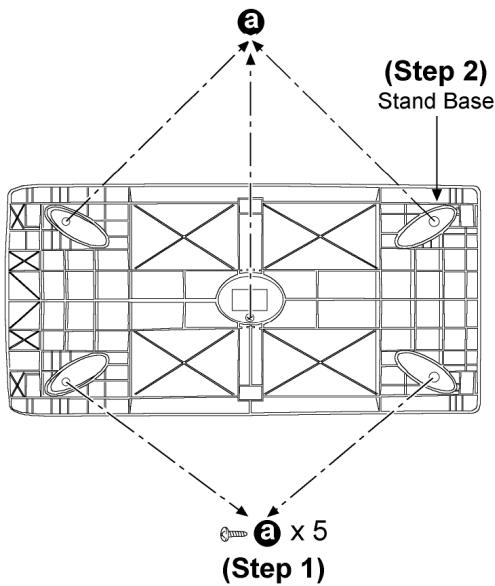

## 6.1. Disassembly flow chart

The following chart is the procedure for disassembling the casing and inside parts for internal inspection when carrying out the servicing.

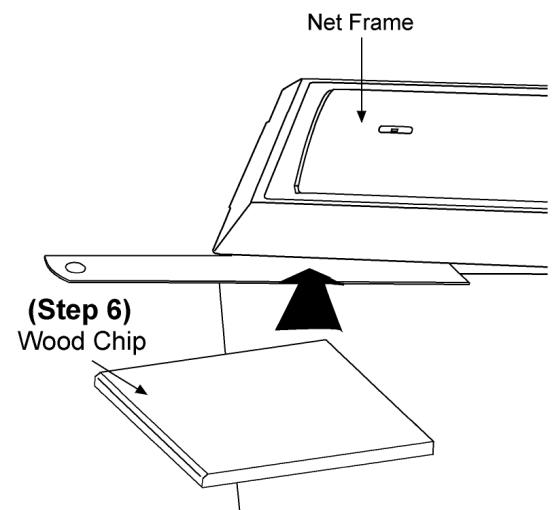

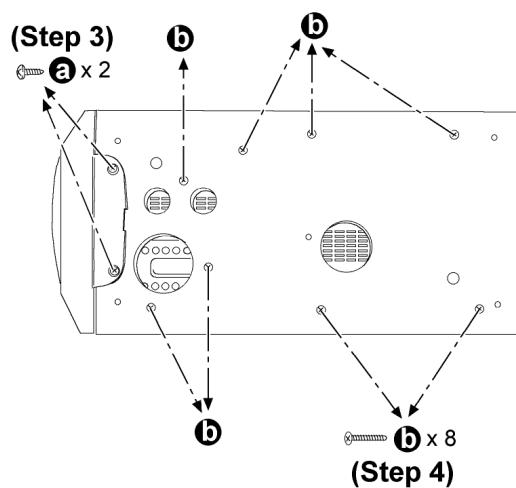

To assemble the unit, reverse the steps shown in the chart below.

## 6.2. Disassembly of the Speaker Unit and Checking of the P.C.B.

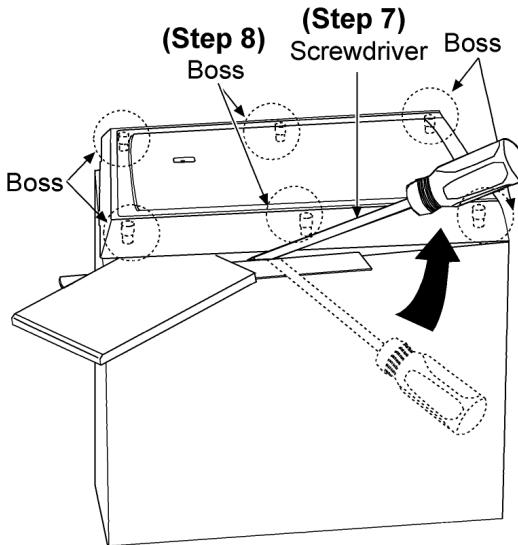

**Step 5:** Use the Steel Ruler to slot into the hole of the bottom cabinet of speaker.

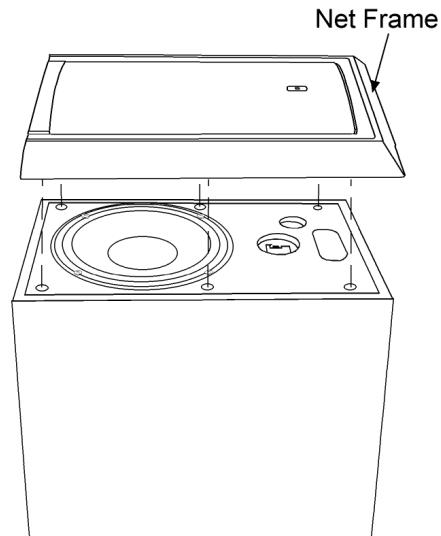

**Step 6:** Use the Wood Chip to slot between the Net Frame and the Steel Ruler as arrow shown.

**Steps 3 & 4:** Remove all the screws from the bottom of the speaker unit.

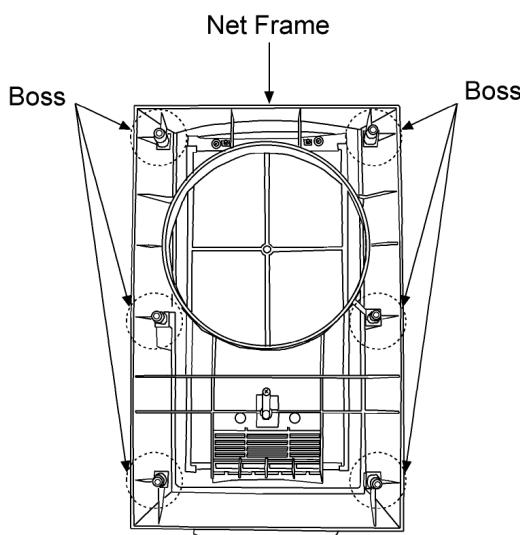

**Step 7:** Use the Screwdriver slightly lift up the Net Frame as arrow shown.

**Step 8:** Take note of the bosses which glued to the unit .

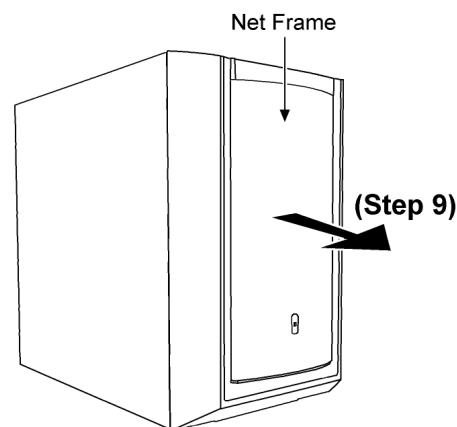

Replace the Net Frame firmly back into the cabinet.

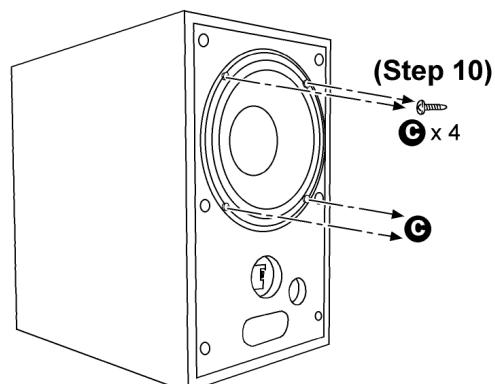

**• Assembly of Net Frame.**

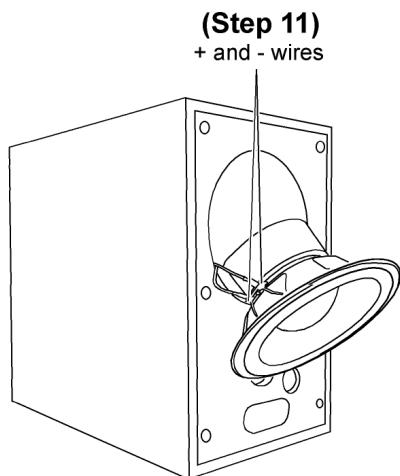

Clean up all the glue at the 6 Boss points and replace with the normal glue.

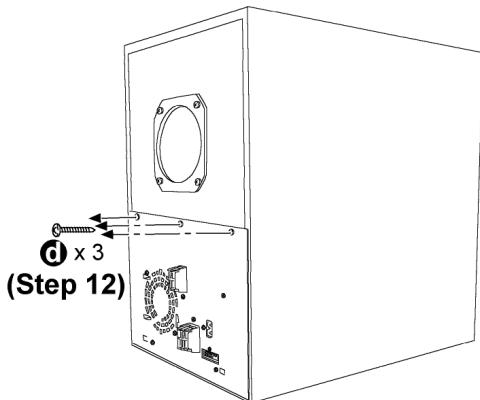

**Step 9:** Remove the Net Frame from the cabinet of speaker.

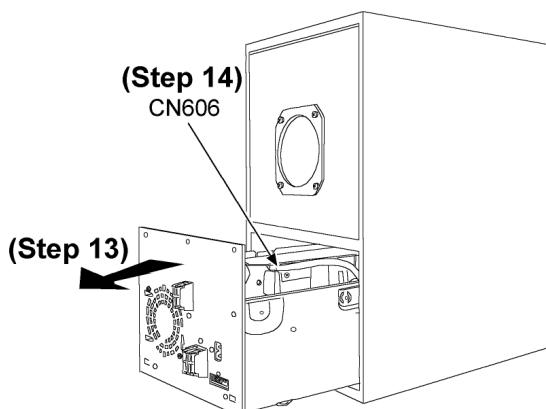

**Step 10:** Remove all the screws from the subwoofer.

**Step 11:** Remove the subwoofer by detach the 2 wires.

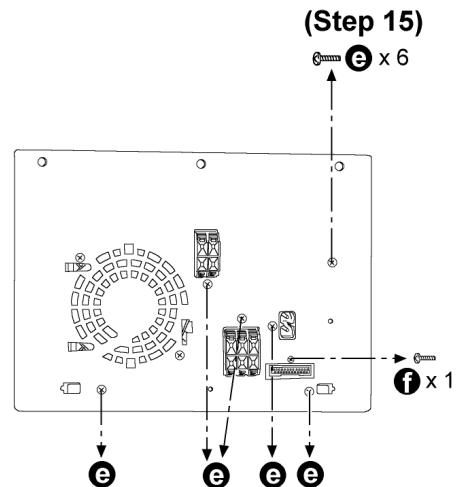

**Step 12:** Remove the screws.

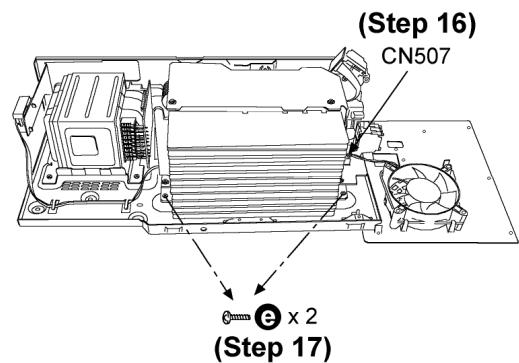

**Step 13:** Pull out the Power Amp unit slightly as shown.

**Note:** Be careful of attach wire at CN606.

**Step 14:** Release the connector CN606 then pull out the entire Power Amp unit.

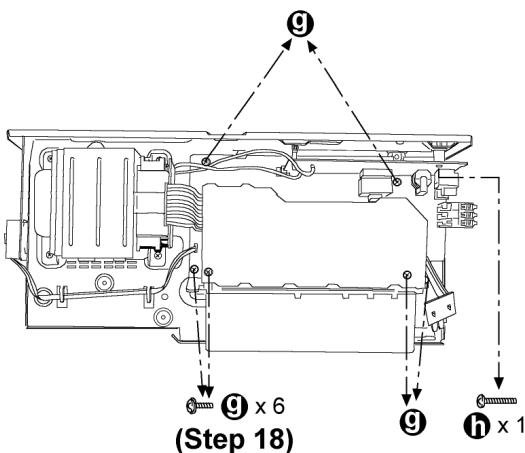

**Step 15:** Remove all the screws.

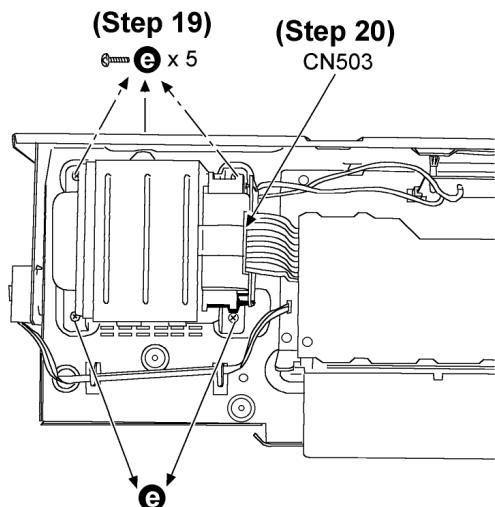

**Step 16:** Release the connector CN507 to remove the rear panel.

**Step 17:** Remove all the screws.

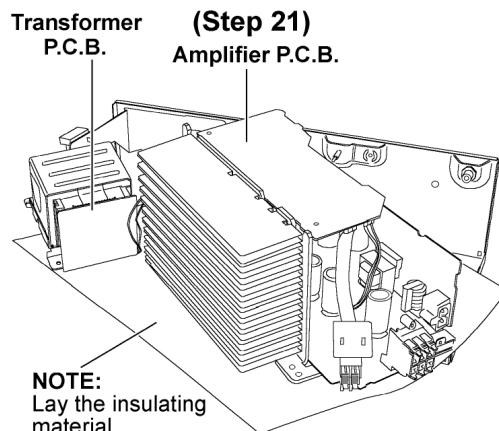

**Step 18:** Remove all the screws.

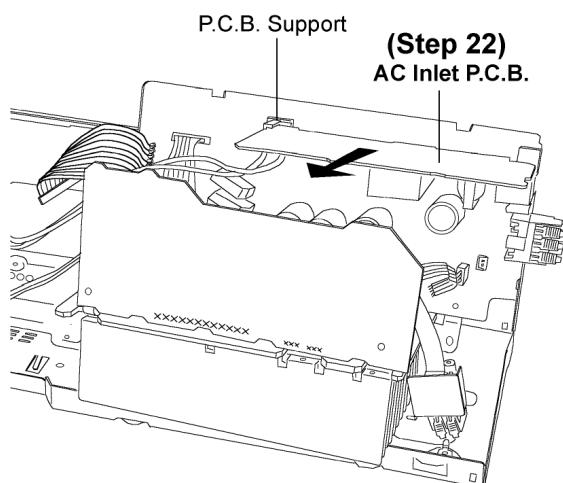

**Step 19:** Remove all the screws.

**Step 20:** Detach the connector CN503 and remove the transformer.

**Step 21:** Place the Transformer P.C.B., Amplifier P.C.B. and the AC Inlet P.C.B. as shown for checking.

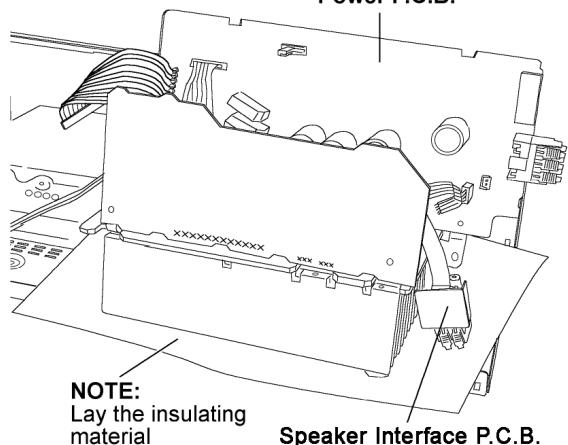

**Steps 22:** Release the AC Inlet P.C.B. as arrow shown.

- Checking for the Power and Speaker Interface P.C.B.

- Checking for the Transformer, Amplifier and AC Inlet P.C.B.

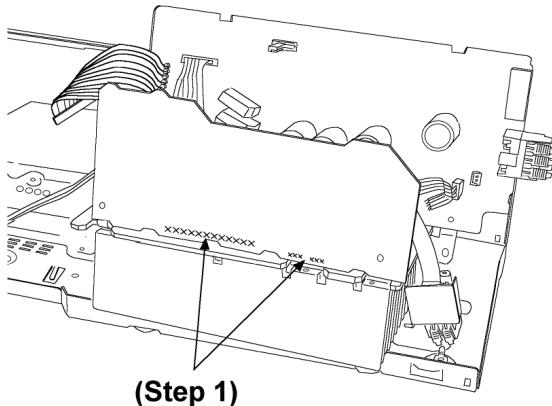

**(Step 23)**  
Power P.C.B.

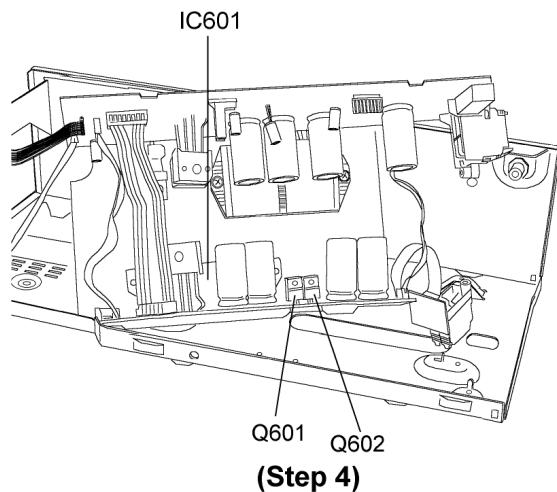

**Step 23:** Place the Power P.C.B. and the Speaker Interface P.C.B. as shown for checking.

## 6.3. Main Component Replacement Procedures

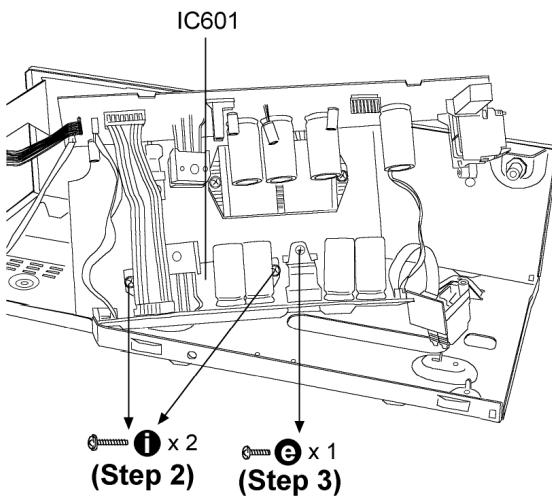

### 6.3.1. Replacement of the Power ICs and Transistors

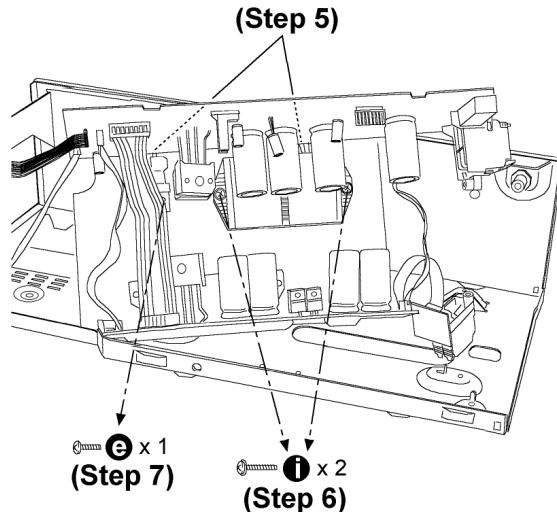

**Step 1:** Desolder the Power IC and Transistor terminals.

**Step 4:** Replacement of the Power IC (IC601) and Transistors (Q601 & Q602).

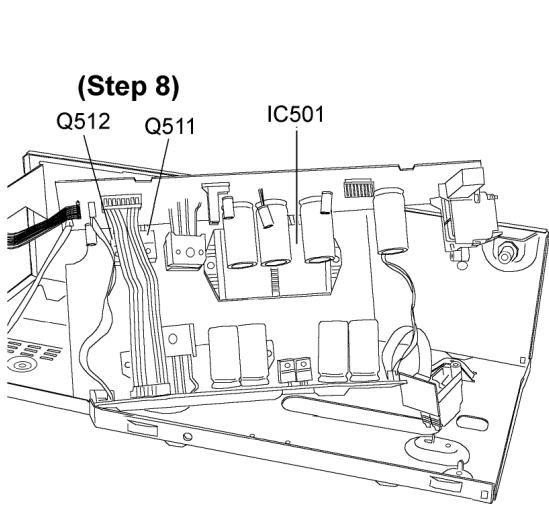

**Steps 2 & 3:** Remove the screws.

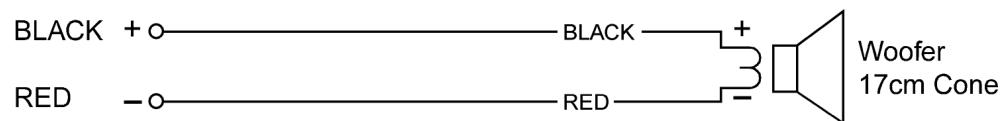

**Steps 5:** Desolder the Power IC and Transistor terminals.

**Steps 6 & 7:** Remove the screws.

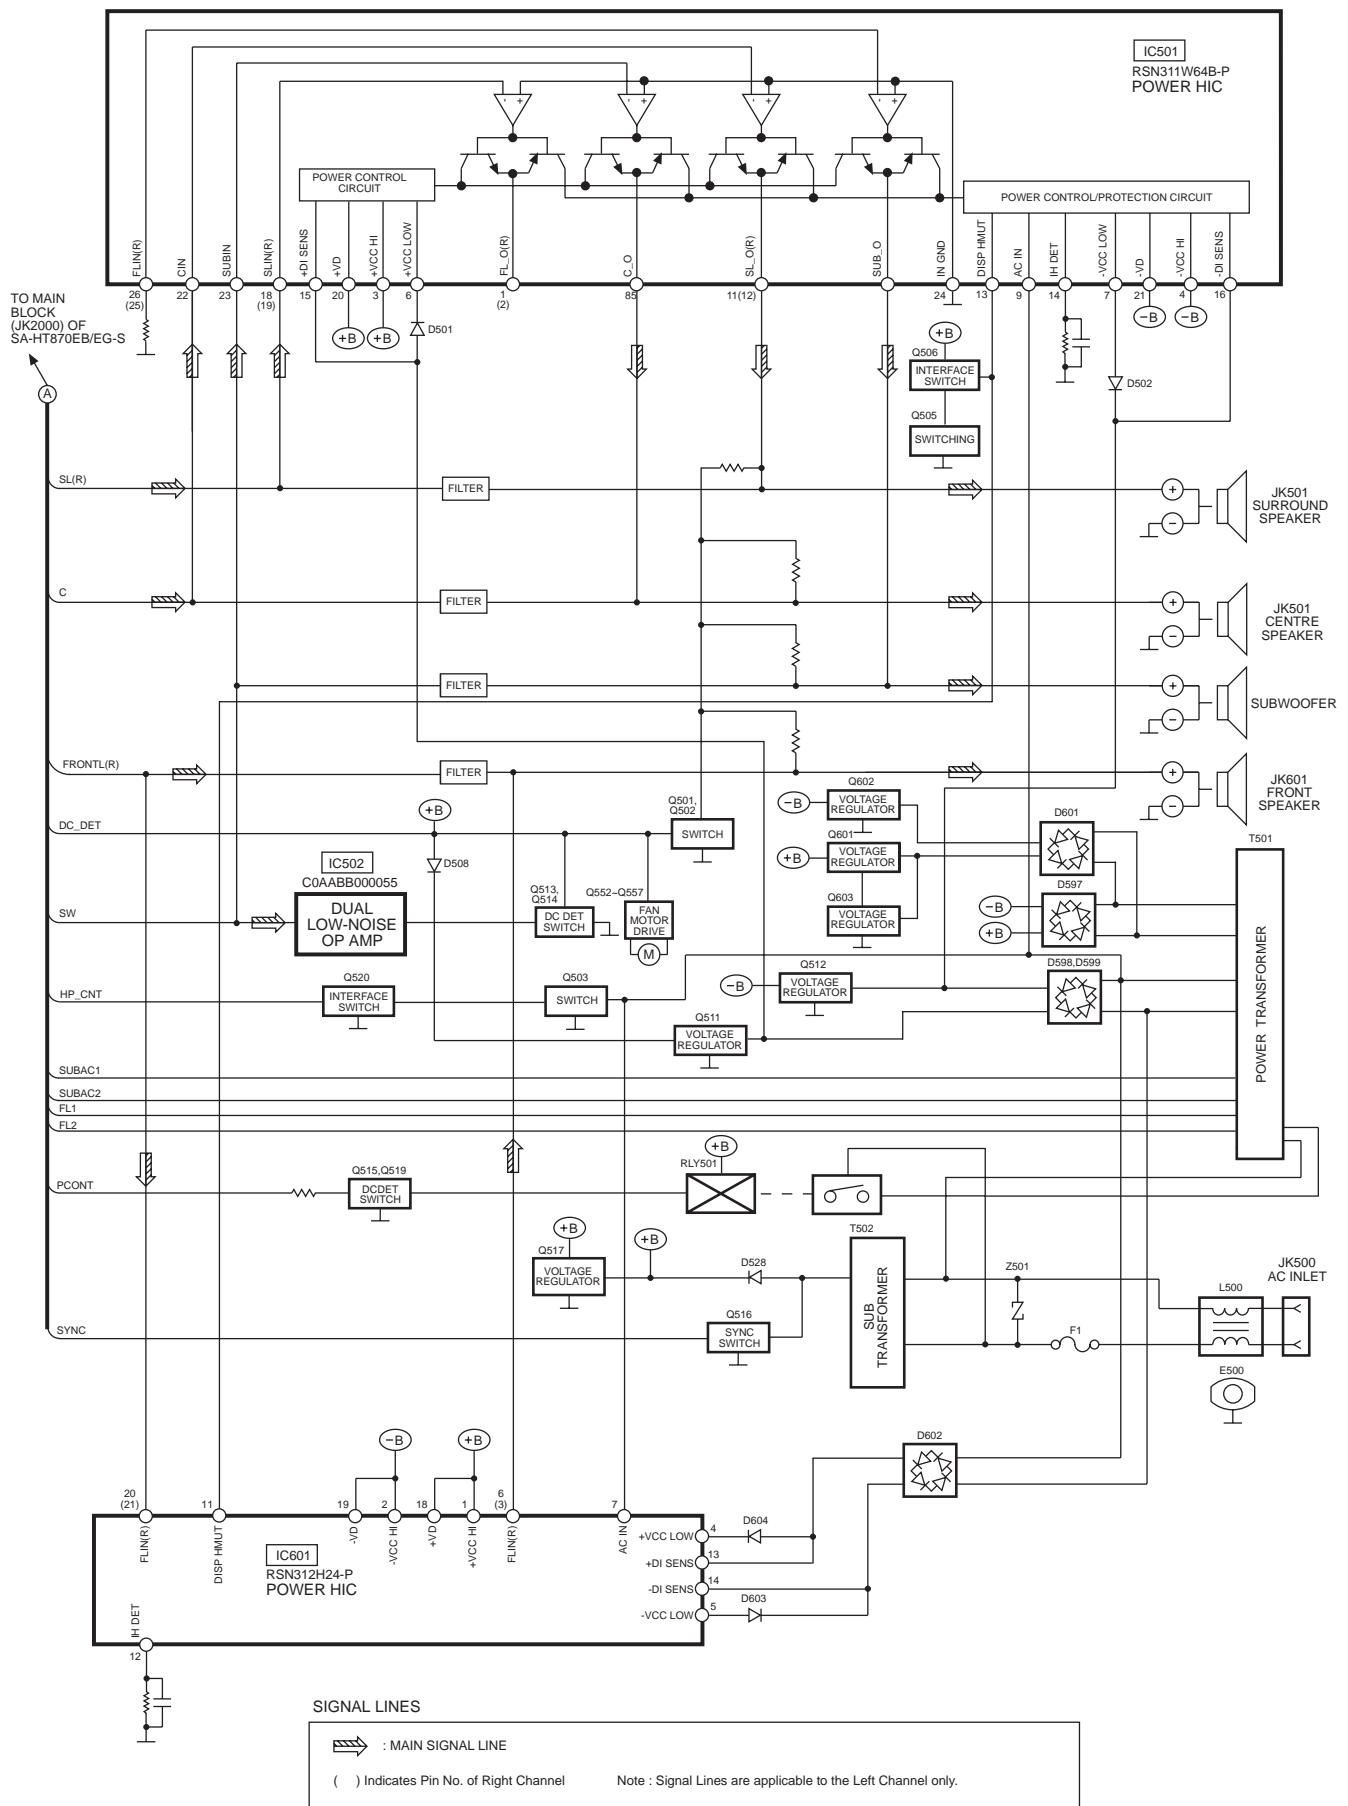

**Step 8:** Replacement of the Power IC (IC501) and Transistors (Q511 & Q512).

## 7 Connection of the Speaker Wiring

## 8 Block Diagram

## 9 Schematic Diagram

(All schematic diagrams may be modified at any time with the development of the new technology)

Note:

- The voltage value and waveforms are the reference voltage of this unit measured by DC electronic voltmeter (high impedance) and oscilloscope on the basis of chassis. Accordingly, there may arise some error in voltage values and waveforms depending upon the internal impedance of the tester or the measuring unit.

**• Importance safety notice :**

Components identified by  $\triangle$  mark have special characteristics important for safety. Furthermore, special parts which have purposes of fire-retardant (resistors), high-

quality sound (capacitors), low-noise (resistors), etc. are used. When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

**Caution !**

IC, LSI and VLSI are sensitive to static electricity.

Secondary trouble can be prevented by taking care during repair.

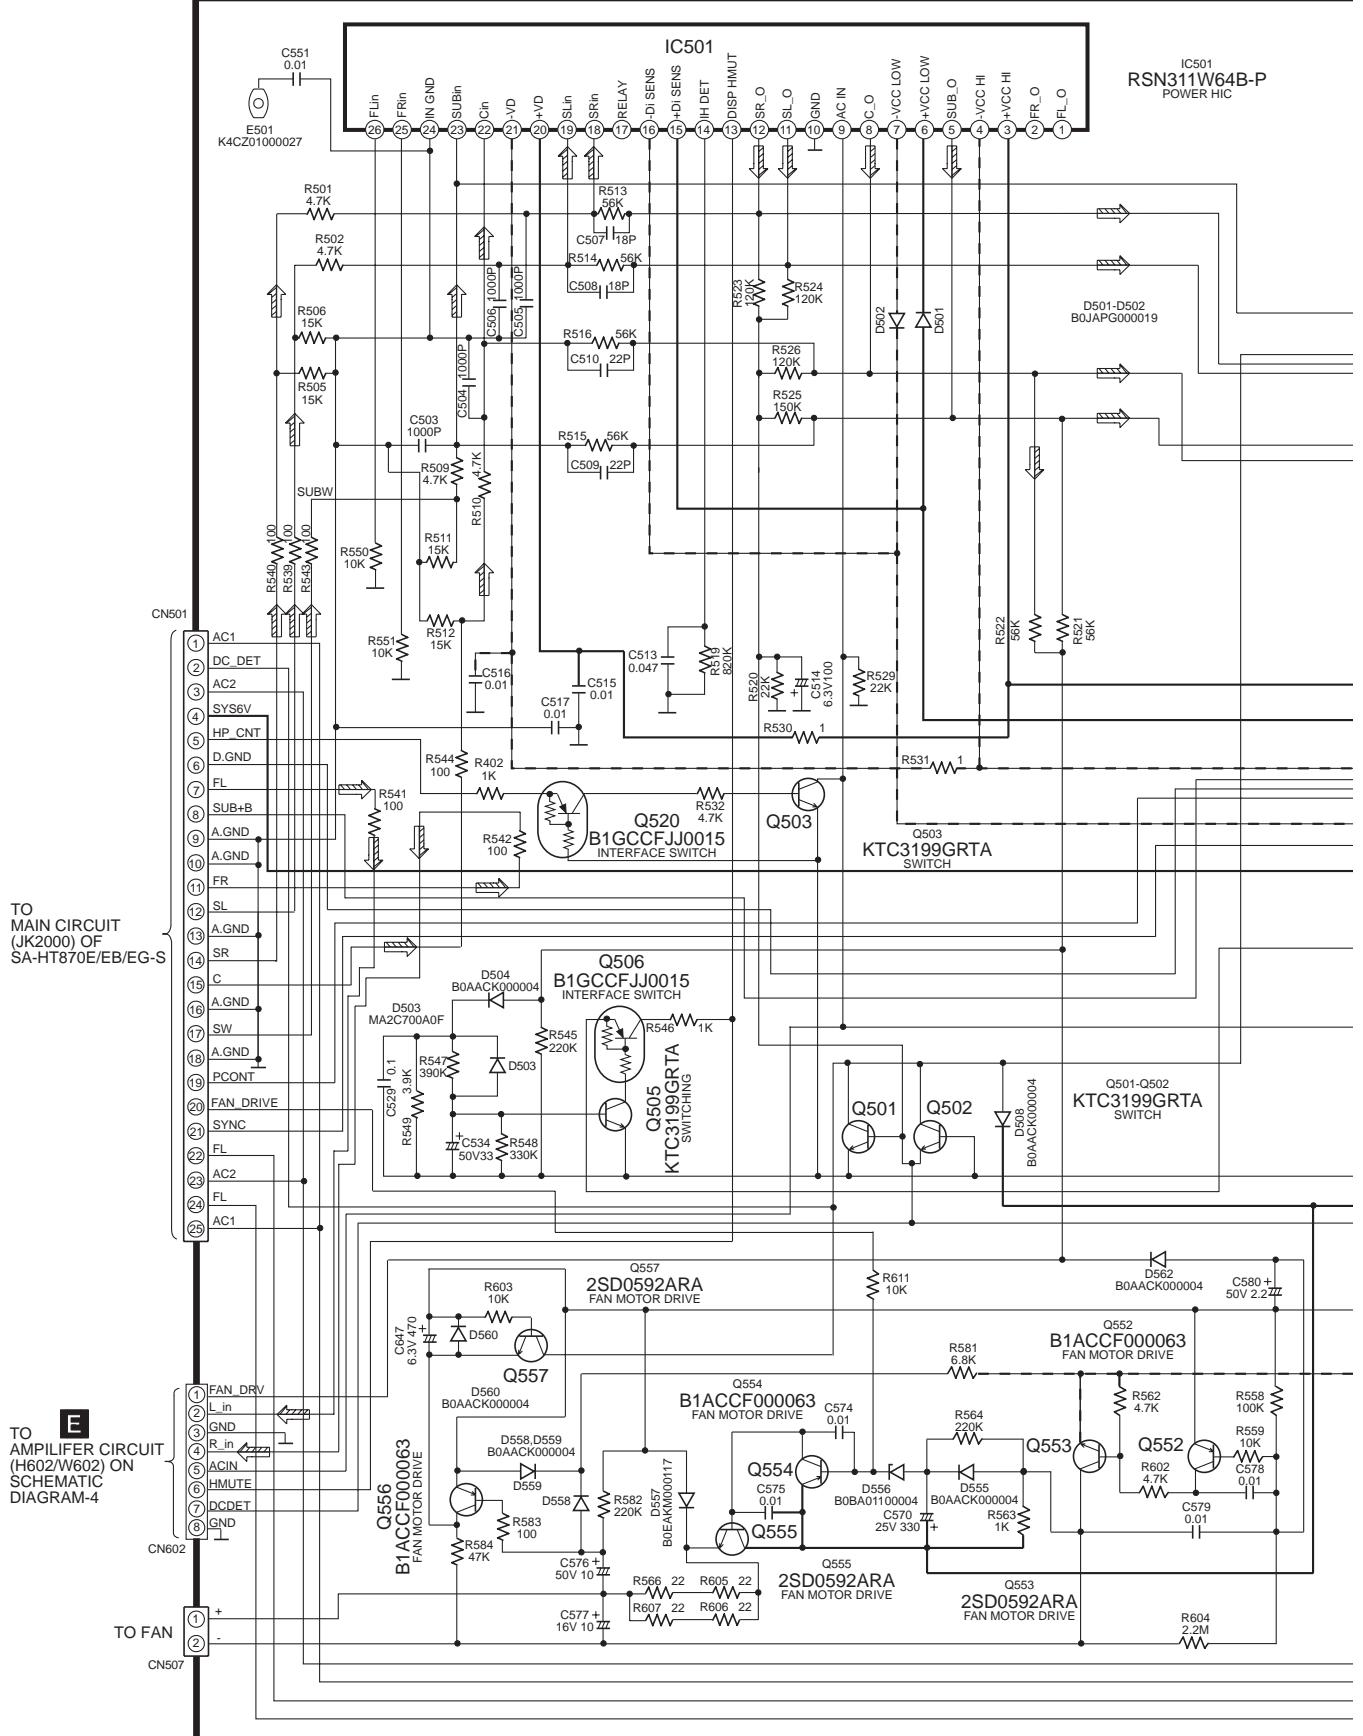

- Cover the parts boxes made of plastics with aluminium foil.
- Put a conductive mat on the work table.
- Ground the soldering iron.
- Do not touch the pins of IC, LSI or VLSI with fingers directly.

# 13 Parts Location and Replacement Parts List

Notes:

- Important safety notice:

Components identified by  mark have special characteristics important for safety.

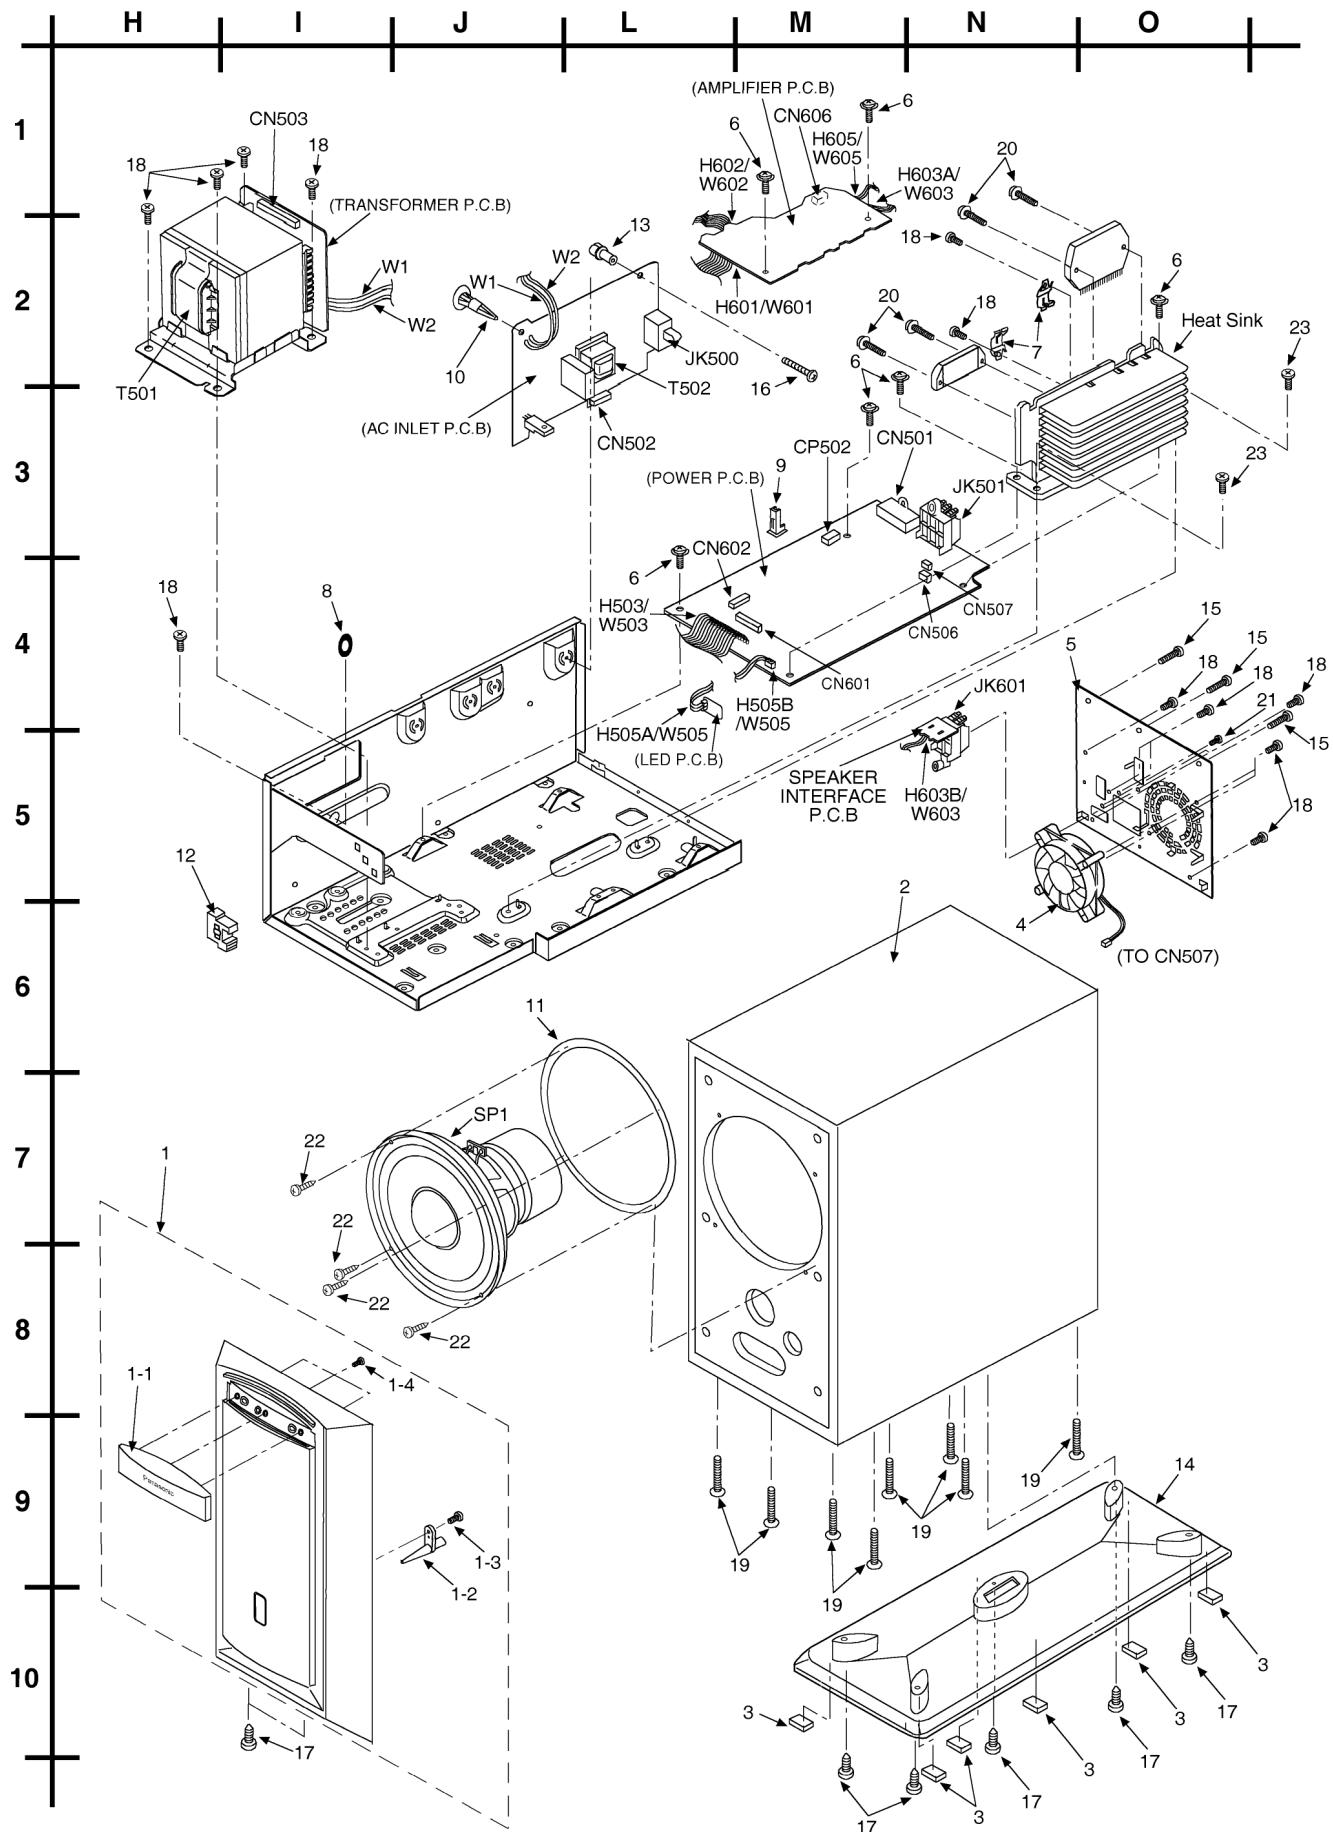

Furthermore, special parts which have purposes of fire-retardent (resistors), high-quality sound (capacitors), low noise (resistors), etc are used.

When replacing any of these components, be sure to use only manufacturer's specified parts shown in the parts list.

- The parenthesized indications in the Remarks columns specify the areas or colour. (Refer to the cover page for area or colour)  
Parts without these indications can be used for all areas.
- Capacitor values are in microfarads ( $\mu\text{F}$ ) unless specified otherwise, P= Pico-farads (pF), F= Farads.
- Resistance values are in ohms, unless specified otherwise, 1K=1,000 (OHM).
- The marking (RTL) indicates that the Retention Time is limited for this items. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of a availability is dependent on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.
- [M] Markings in the Remarks columns indicates parts supplied by **PAVCSG**.
- The "(SF)" mark denotes the standard part.
