1) Also available with diode

2) Also available with diode or with electrostatic shielding and diode

General Parameters

Life Expectancy

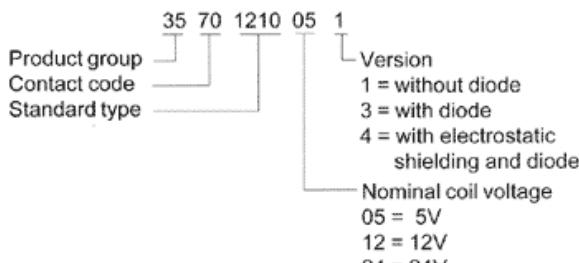

The life expectancy of a Reed Relay is at least 10⁵...10⁶ operations at nominal load. At minimum load the life expectancy can be up to 5 x 10⁸ operations. The mechanical life expectancy is 10⁹ operations (minimum). Through the switching of higher loads, especially inductive or capacitive and lamp loads, life expectancy can be considerably reduced due to exceeding the permissible maximum current.

Thermal Resistance of the DIL-SIL-Reed Relays: 70 K/W.

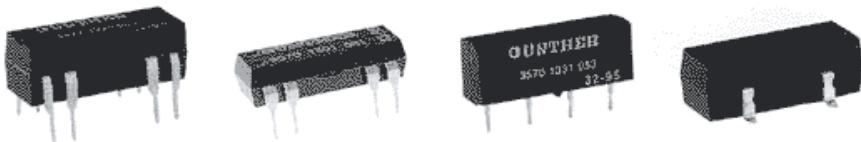

Thermoelectric Voltage

Between FeNi (Reed Switch) and Cu (PCB) a thermoelectric voltage $U_{th} = k \times (T_1 - T_2)$ occurs with the constant $k = 50 \mu V/^{\circ}C$ (T =temperature). Reed Relays can be used above this thermoelectric voltage.

Order Example:

1) Also available with diode

2) Also available with diode or with electrostatic shielding and diode

Vibration and Shock Resistance

During the evaluation of vibration and shock resistance, the relays are driven with nominal voltage. The switches should not open longer than 10 µsec.

	Normally Open	Change Over	Wetted
Vibration resist.	20 g / 5...2000 Hz	10 g / 5...500 Hz	10 g / 10...500 Hz
Shock resistance	100 g / 11 ms	50 g / 11 ms	30 g / 11 ms

Sine half wave Sine half wave Sine half wave

Washability

Resistant to Caltron, Freon, alcohol and distilled (pure) water. During the final rinsing phase only the purest substances should be used.

Capacitance

The capacitance parameters are regarded as typical and are calculated for versions without shielding:

Capacitance, measured...	N.O. wetted	Change over
across open contact	0,8 pF	1,8 pF
between open contact and coil	1,5 pF	3,6 pF
between closed contact and coil	3,0 pF	7,0 pF

Solderability

By using laser welding in manufacture, a number of our DIL-SIL-Reed Relays are suitable for enhanced soldering requirements. All relays meet the DIN 8505 requirements.

DIL-SIL-REED RELAYS

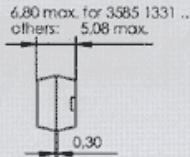

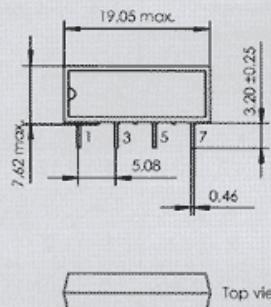

DIL-High Profile

DIL-Low Profile

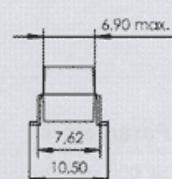

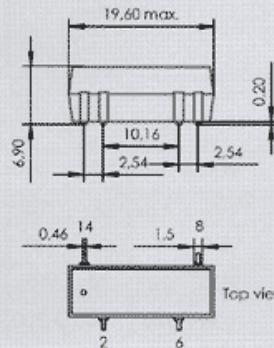

SIL

Dimensions in mm

Surface Mount

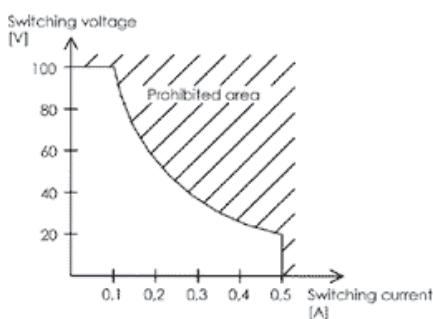

Pull-in and Drop-out Voltage, Coil Resistance

The tolerances indicated are valid at $25^{\circ}\text{C} \pm 3^{\circ}\text{C}$. The temperature coefficient of the coil resistance is $0.4\% / ^{\circ}\text{C}$.

Switching Voltage, Current and Capacity

The parameters as listed for switching voltage, current and capacity are maximum values. Exceeding any one of these values causes overload and reduces relay life expectancy.

Contact Resistance

The contact resistance indicated is valid for new relays at nominal coil voltage.

The four-point method at 2 VDC / 100 mA or 10 mA is applied. Custom solutions for special applications, especially for switching signals smaller than 1 mV at 10 μA (low-level-applications) or applications requiring dynamic contact resistance measurement can be produced for special switching needs.

Temperature Range

The operating temperature of the relay is the equivalent of the internal temperature. If the relays are used in ambient temperatures (ϑ_a) higher than 20°C , the maximum permissible operating voltage (U_T) must be calculated according to the table indicated below, using the formula:

$$U_T = U_{\max} \times k_1 \quad (U_{\max} = \text{max. permissible operating voltage})$$

ϑ_a ($^{\circ}\text{C}$)	20	30	40	50	60	70
k_1	1,00	0,96	0,92	0,88	0,74	0,70

Switching Time

When using dry Reed Switches in relays, contact bounce may occur.
Pull-in time (incl. bounce time) typ. 0.5...1.8 ms
at nominal voltage and 20 Hz
Drop-out time (with diode) typ. 0.5...1.5 ms
at nominal voltage and 20 Hz

Magnetic Shieldings

Magnetic shieldings for Reed Relays are also available:

- magnetic shieldings for SIL-Reed Relays:
 - top side and side by side
 - top side and front end
 - top side, side by side and front end
- magnetic shieldings for DIL-Reed Relays:
 - top side, side by side and front end suitable for the DIL-High profile

Comment

Relay versions with 15 V nominal coil voltage are available for orders exceeding min. quantity of 1.000 pieces.
