

## High frequency sine wave inverter RS232 communication protocol

### 1. Query command:

- 1.1 [QPIGS](#) Query real-time data 51 50 49 47 53 B7 A9 0D
- 1.2 [QPIRI](#) Query rating information 51 50 49 52 49 F8 54 0D
- 1.4 [QM0D](#) Query working mode 51 4D 4F 44 49 C1 0D
- 1.5 [QPIWS](#) query status word 51 50 49 57 53 B4 DA 0D
- 1.6 [QVFW](#) Query the firmware version number of the main chip 51 56 46 57 62 99 0D
- 1.7 [QVFW2](#) Query the firmware version number of the SCC chip 51 56 46 57 32 C3 F5 0D
- 1.8 [QMCHGCR](#) Query the total charging current setting range 51 4D 43 48 47 43 52 D8 55 0D
- 1.9 [QMUCHGCR](#) Query the AC charging current setting range 51 4D 55 43 48 47 43 52 26 34 0D
- 1.10 [QFLAG](#) Query to set the flag bit of status update 51 46 4C 41 47 98 74 0D
- 1.11 [QSID](#) Query device ID 51 53 49 44 BB 05 0D
- 1.12 [QRI](#) Query rating information (same as SCC command) 51 52 49 D8 CE 0D
- 1.13 [QFAULT](#) Query fault information 51 46 41 55 4C 54 16 1F 0D
- 1.19 [QID](#) Query device ID 51 49 44 D6 EA 0D
- 1.21 [QMD](#) Query machine information 51 4D 44 1A 2E 0D
- 1.22 [QMN](#) Query the machine model (3K is valid, 5K is invalid) 51 4D 4E BB 64 0D
- 1.24 [QGR](#) Query UPS mode (01:UPS/00:APL) 51 47 52 87 12 0D
- 1.25 [QBV](#) Query battery voltage and capacity 51 42 56 38 63 0D
- 1.26 [QBT](#) Query battery type 51 42 54 18 21 0D
- 1.27 [QBP](#) Query buzzer switch status 51 42 50 58 A5 0D
- 1.28 [QOP](#) Query output source priority 51 4F 50 2E F9 0D
- 1.29 [QCP](#) Query charging source priority 51 43 50 6B 94 0D
- 1.30 [QCVV](#) Query charging CV fast charging voltage 51 43 56 56 D9 58 0D
- 1.31 [QBFT](#) Query float voltage 51 42 46 54 CD 59 0D
- 1.32 [QBVO](#) Query the battery overvoltage protection point 51 42 56 4F 6D 70 0D
- 1.33 [QOLBY](#) Query overload transfer to bypass 51 4F 4C 42 59 CD AF 0D
- 1.36 [QBVTU](#) Query the voltage value of battery low to mains setting 51 42 56 54 55 18 D2 0D
- 1.37 [QOPM](#) Query parallel mode 51 4F 50 4D A5 C5 0D
- 1.38 [O OPC](#) Query output current 51 4F 50 43 44 0B 0D
- 1.42 [QBEQI](#) Query equalizing setting parameters (3K is valid, 5K is invalid) 51 42 45 51 49 2E A9 0D

## 2. Setting command:T

- 2.1 P\*a Buzzer alarm ON/OFF (\*=>E: ON; \*=>D: OFF)
- 2.2 P\*b Overload transfer to bypass function on/off in battery inverter mode (\*=>E: On; \*=>D: Off)
- 2.3 P\*j Set the power saving mode on/off (\*=>E: On; \*=>D: Off) (5K is valid, 3K is invalid, and it is invalid when paralleling)
- 2.4 P\*k Set the LCD to return to the main interface function after 1 minute of no key operation  
(\*=>E: ON; \*=>D: OFF)
- 2.5 P\*u overload restart function ON/OFF (\*=>E: ON; \*=>D: OFF)
- 2.6 P\*v over-temperature restart function on/off (\*=>E: on; \*=>D: off)
- 2.7 P\*x Display backlight on/off after 1 minute of no key operation (\*=>E: always on; \*=>D: off)
- 2.8 P\*y Input source change alarm function ON/OFF (\*=>E: ON; \*=>D: OFF)
- 2.9 P\*z Set the computer communication software fault record function on/off (\*=>E: on; \*=>D: off)
- 2.10 PCP\*\* Set charging source priority
- 2.11 POP\*\* Set output source priority
- 2.12 PGR\*\* Set UPS mode (\*\*=>00: APL mode)/(\*\*=>01: UPS mode)
- 2.13 PBT\*\* Set the battery type (\*\*=>00: AGM)/(\*\*=>01: FLOODED)/(\*\*=>02: USER)
- 2.14 F\*\* set output frequency (\*\*=>50: 50Hz)/(\*\*=>60: 60Hz)
- 2.15 MNCHGC\*\*\* Set the maximum charging current (setting range: 10, 20...110, 120)
- 2.16 MUCHGC\*\* Set the maximum charging current of the mains (setting range: 02, 10, 20...50, 60)
- 2.17 PBCV\*\*.\* Set the voltage of the battery returning to the mains when the mains is normal (setting range: 22.0, 22.5...25.0, 25.5)
- 2.18 PBDV\*\*.\* Set the voltage for battery recovery when the mains is normal
- 2.19 PCVV\*\*.\* Set the CV fast charging voltage setting range (25.0...31.5) The battery type can only be set when the battery type is USER
- 2.20 PBFT\*\*.\* Set the float voltage setting range (25.0...31.5) The battery type can only be set when the battery type is USER
- 2.21 PSDV\*\*.\* Set the discharge cut-off voltage setting range (21.0....24.0) The battery type can only be set when the battery type is USER
- 2.22 PBVO\*\*.\* Set the battery overvoltage protection point (3K setting range is 24.0-33.0) (5K setting range is 48.0-60.0)
- 2.26 **PF**restore default settings 50 46 26 BD 0D
- 2.27 **REEP**restore default settings
- 2.30 POLBY\*\* Set overload to bypass mode (00: overload not to bypass / 01: overload to bypass mode)
- 2.31 PBP\*\* set the buzzer switch (00: close the buzzer / 01: open the buzzer)
- 2.32 POPM\*\* Set parallel mode (00: no parallel/01: single-phase parallel/02: 3P1,/03: 3P2/04: 3P3)
- 2.33 PUPSTYPE Set the UPS type? (00: What type? / 01: What type?)
- 2.34 **PLCDV**\*\* Set the LCD screen version to 0 by default; 1 is for other displays
- 2.35 PPVOKC\* Set to charge when the solar energy is normal (0: charge when a single unit is normal; 1: charge when all are normal) (3K is valid, 5K is invalid)
- 2.36 **PSPB**\* Set to charge when the solar energy is normal (0: charge when a single unit is normal; 1: charge when all are normal) (3K is valid, 5K is invalid)
- 2.37 PBEQE\* Set the equalizing function (default 0: disable equalizing; 1: enable equalizing) (3K is valid, 5K is invalid)

**2.38 PBEQT\*\*\***Set the equalizing time (default 60 minutes: 5-900 +5 per gear) (3K is valid, 5K is invalid)

**2.39 PBEQP\*\*\***Set the number of days between equal charging (default 30 days: 0-90 +1 per file) (3K is valid, 5K is invalid)T

**2.40 PBEQ\*\*\*.\*\*** Set the equalizing voltage (default 29.20V, 25.00-31.50 +0.1V per gear) (3K is valid, 5K is invalid)

**2.41 PBEQOT\*\*\***Set the timeout time for equalizing charge (default 120 minutes: 5-900 +5 per gear) (3K is valid, 5K is invalid)

**2.42 PBEQA\*** Set the equalizing function to activate immediately (default 0: immediate activation is prohibited; 1: immediate activation) (3K is valid, 5K is invalid)

A	(	Start byte		
B	BBB.B	rated grid voltage	B is an Integer number 0 to 9. The units are V.	
C	CC.C	Rated input current	C is an Integer number 0 to 9. The units are A.	
D	DDD.D	rated AC output voltage	D is an Integer number 0 to 9. The units are V. <b>Only 230V, cannot be set to 220V.</b> <b>120V models can be set to 110V.</b>	
E	EE.E	rated AC output frequency	E is an Integer number from 0 to 9. The units are Hz.	

F	FF.F	Rated output current	F is an Integer number 0 to 9. The units are A.	
G	GGGG	ratedAC output apparent power	G is an Integer number from 0 to 9. The units are VA	
H	HHHH	ratedAC output active power	H is an Integer ranging from 0 to 9. The units are W.	
I	II.I	ratedBattery voltage	I is an Integer ranging from 0 to 9. The units are V.	
J	JJ.J	Battery voltage Low-end to mains switching point	J is an Integer ranging from 0 to 9. The units are V.(3K setting range 22-25.5V default 23V; 5K setting range 44-51V default 46V)	
K	KK.K	Battery voltage shutdown point	K is an Integer ranging from 0 to 9. The units are V. (3K setting range 21.0-24.0V default 21.0V; 5K setting range 40.0-48.0V default 42.0V)	
L	LL.L	Battery voltage Quick charge point CV	L is an Integer ranging from 0 to 9. The units are V.(3K setting range 24-29.2V default 28.2V; 5K setting range 48-58.4V default 56.4V)	
M	MM.M	Battery voltage Floating point FLV	M is an Integer ranging from 0 to 9. The units are V.(3K setting range 24-29.2V default 27V; 5K setting range 48-58.4V default 54V)	
N	N	Battery Type	N is the battery type: AGM is 0, FLD is 1, USE is 2	
O	OO	Mains maximum chargingInput current for battery.	O is an Integer ranging from 0 to 9. The units are A. Set the maximum charging current of the mains to 60A (the setting range is 2-60A, the default is 30A)	
P	PPP	total current maxInput current for battery.	P is an Integer ranging from 0 to 9. The units are A.(5KSolar energy 80A + mains 60A), the default setting is 60A	
Q	Q	input range	Q input range: 0: APL mode (90-280V); (switching time 8-20mS) 1: UPS mode (170-280V); (switching time 5-15mS)	
R	R	Load power source priority	R is the priority of the load power supply source: 0: UTL mode (mains power priority) [default] 1: SOL mode (solar priority) 2: SBU mode (S solar 1, B battery 2, U mains 3)	
S	S	Charging source priority	S is the charging source priority: 0: CUT: (utility first mains priority) 1: CSO: (solar first solar priority) 2: SUN: (solar&utility solar energy and utility power [default]) 3: OSO: (only solar only solar charge)	
T	T	?A maximum of T devices can be connected in parallel	T: (default 6) may be the maximum number of 6 units that can be paralleled	
U	UU	?	U: (default 01)	
V	V	?	V: (default 0)	
W	W	Parallel mode	W:(0: no parallel/1: single-phase parallel/2: 3P1, /3: 3P2/4: 3P3)	
X	XX.X	Battery voltage High-end to inverter switching point	X is an Integer ranging from 0 to 9. The units are V.(3K range 24-29V +FUL; when setting FUL = 00.0V 5K range 48-58V+FUL default 54V; FUL=00.0V)	

Y	Y	Solar working conditions in parallel	YSolar charging working conditions in parallel 0: ONE (single machine can be charged by solar energy when parallel machine) 1: ALL (all machines can be charged only when all machines have solar energy)	
Z	Z	Automatic adjustment of solar maximum charging power	Z: (default 1: SbE is automatically adjusted according to the load; 0: The maximum charging power of Sbd solar energy is the maximum charging power of the battery)
