## MSM65344A

This version: Jan. 1998  
Previous version: Nov. 1996

### 8-Bit Microcontroller with A/D Converter (with LCD Driver)

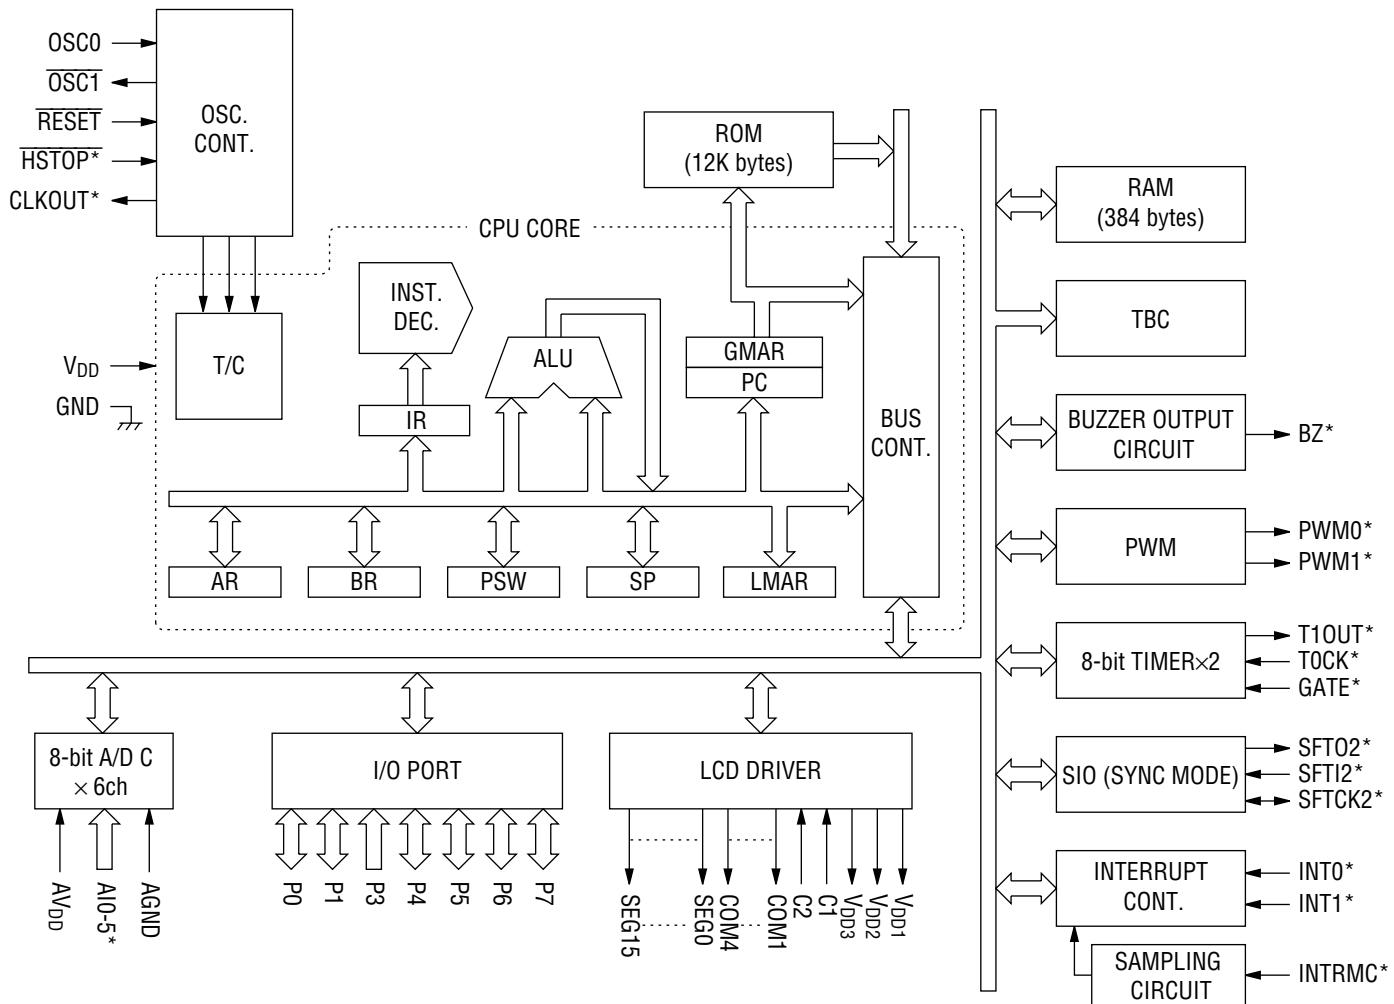

#### GENERAL DESCRIPTION

The MSM65344A is a high performance 8-bit microcontroller that employs OKI original CPU core nX-8/50. The MSM65344A includes 12K-byte program memory, 384-byte data memory, LCD driver, timer, PWM, serial I/O, and 8-bit A/D converter. Also available is the MSM65P344, which replace the on-chip program memory with one-time PROM.

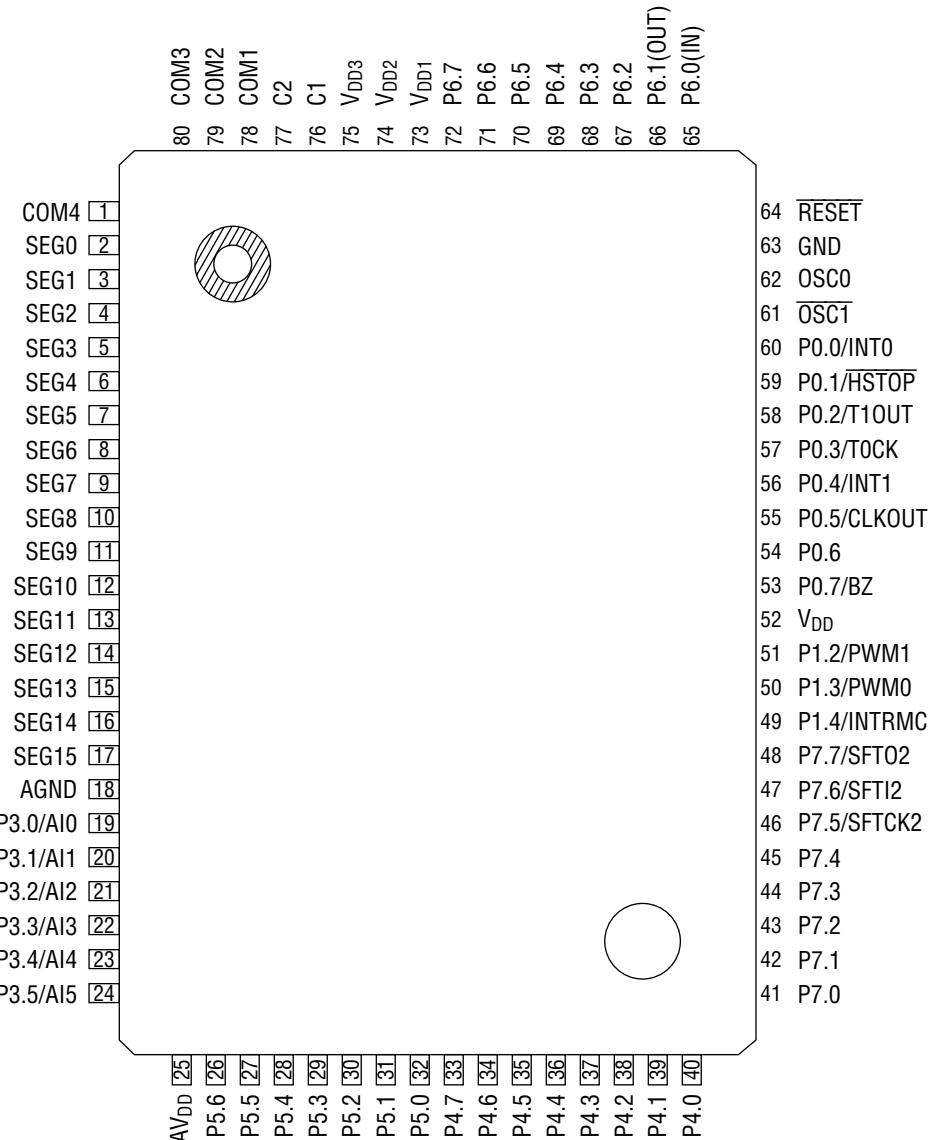

#### FEATURES

- Operating range
  - Operating voltage : 2.7V to 5.5V
  - Operating temperature : -20°C to +70°C
  - Operating frequency : 0 to 10MHz (@V<sub>DD</sub>=5V±10%)  
0 to 5MHz (@V<sub>DD</sub>=2.7V to 5.5V)
- Current consumption (TYP.)
  - Current consumption (TYP.) : 5mA (@5MHz, V<sub>DD</sub>=3V)  
20mA (@10MHz, V<sub>DD</sub>=5V)  
1.5mA (@5MHz, V<sub>DD</sub>=3V, HALT MODE)  
4μA (V<sub>DD</sub>=3V, STOP MODE)
  - Power consumption : 400ns (@10MHz), 800ns (5MHz)
- Minimum instruction execution time
- CPU core : 8-bit CPU core nX-8/50
- General memory space : Internal 12K-byte program memory
- Local memory space : Internal 384-byte data memory + SFR
- LCD driver : 16 × 4 (selectable duty cycle from 1/4, 1/3 or 1/2 with software)
- I/O port
  - Input-output port : 7 ports, 48 bits  
3 ports × 8 bits, 1 port × 7 bits, 1 port × 6 bits,  
1 port × 3 bits
  - Input port : 1 port × 6 bits, 1 port × 1 bit
  - Output-port : 1 port × 1 bit
- Timer : 8-bit auto-reload timer × 2
- Counter : Time base counter × 1 (14 bits)
- Serial I/O : 1ch, clock sync × 1
- PWM : 2ch, 8-bit duty, cycle from 1Hz to 80kHz  
(@10MHz)
- Buzzer output circuit : 1 circuit, selectable from 1kHz to 16kHz
- A/D converter : 8-bit × 6-ch
- External interrupt : 2 lines, selectable from rising edge/falling edge/both edges
- External interrupt for remote control : With sampling circuit for noise prevention
- Interrupt source : 11 sources
- Package:
  - 80-pin plastic QFP (QFP80-P-1420-0.80-BK) (Product name: MSM65344A-xxxxGS-BK)  
xxxx indicates the code number.
- Others : CPU clock can be an OSC or half-OSC clock.  
Time base counter can be selected with 1/4n of a CPU clock (n=1 to 8).

## BLOCK DIAGRAM

## PIN CONFIGURATION (TOP VIEW)

**80-Pin Plastic QFP**

## PIN DESCRIPTION

### Basic Function

Function	Pin	Symbol	Type	Description
Power Supply	52	$V_{DD}$	—	Digital supply voltage (5V)
	63	GND	—	Digital ground (0V)
	25	$AV_{DD}$	—	Analog supply voltage (5V)
	18	$AGND$	—	Analog ground (0V)
	73	$V_{DD1}$	—	Bias output for LCD driver
	74	$V_{DD2}$	—	Bias output for LCD driver
	75	$V_{DD3}$	—	Bias output for LCD driver
	76	C1	—	Pins for connecting capacitors that generate bias for the LCD driver.
	77	C2	—	
Oscillation	62	OSC0	Input	Oscillation input pin on the OSC side: Connect to a quartz oscillator (ceramic resonator), or input external clock.
	61	$\overline{OSC1}$	Output	Oscillation output pin on the OSC side: Connect to a quartz oscillator (ceramic resonator). When external clock is input to the OSC0 pin, the $\overline{OSC1}$ pin should be kept open.
Control	64	$\overline{RESET}$	Input	System reset input: When this pin is set to the "L" level, the internal status is initialized to start execution of instructions from address 0040H. The input is pulled up to $V_{DD}$ with an internal pull-up resistor.

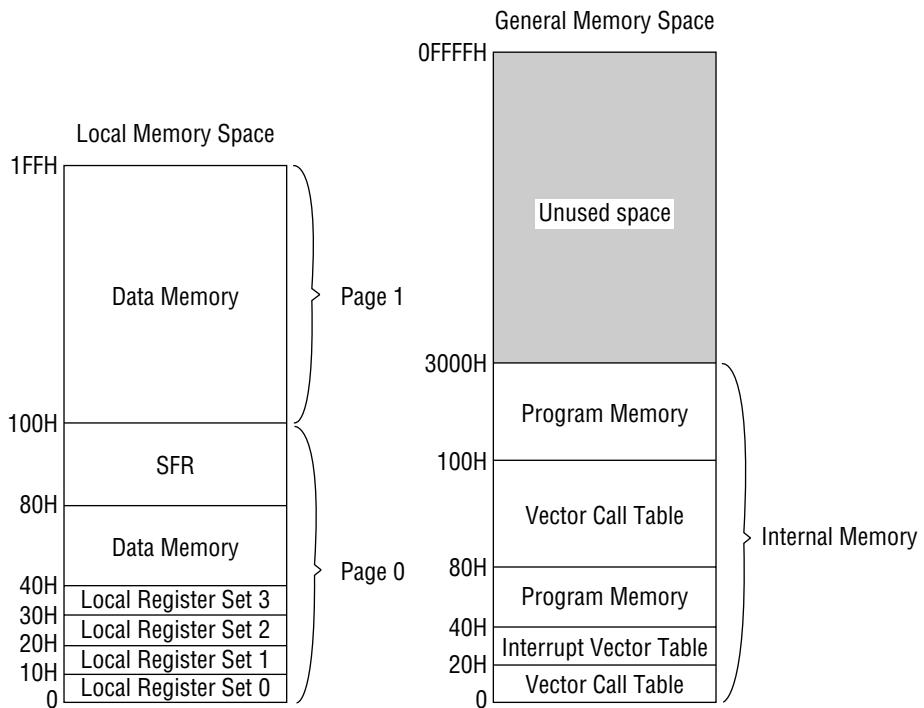

**Basic Function (Continued)**

<b>Function</b>	<b>Pin</b>	<b>Symbol</b>	<b>Type</b>	<b>Description</b>
Port	60 to 53	P0.0 to P0.7	I/O	8-bit input-output port (port 0): Each of bits 0 to 7 can be configured to be an input or an output by the direction register of port 0 (PODIR). In addition to the basic function as an input-output port, a secondary function is allocated to each of P0.0 through P0.7. Refer to the next table.
	51 to 49	P1.2 to P1.4	I/O	3-bit input-output port (port 1): Each of bits 1.2 to 1.4 is configured to be input or output by the direction register of port 1 (P1DIR). In addition to the basic function as an input-output port, a secondary function is allocated to each of P1.2 through P1.4. Refer to "PIN DESCRIPTION (Secondary Function)".
	19 to 24	P3.0 to P3.5	I	6-bit input port (port 3): Each of P3.0 to P3.5 functions as analog input channel of A/D converter.
	40 to 33	P4.0 to P4.7	I/O	8-bit input-output port (port 4): 8-bit input-output port.
	32 to 26	P5.0 to P5.6	I/O	7-bit input-output port (port 5): Each of bits 5.0 to 5.6 can be configured to be an input or an output by the direction register of port 5 (P5DIR).
	65	P6.0 (IN)	I	1-bit input port (port 6.0): 1-bit input port.
	66	P6.1 (OUT)	O	1-bit output port (port 6.1): Pulled high when reset is done. If this pin is set to the "0" level during reset, this IC goes into a test mode, disabling execution of the user program.
	67 to 72	P6.2 to P6.7	I/O	6-bit input-output port (port 6): 6-bit input-output port.
LCD Driver	41 to 48	P7.0 to P7.7	I/O	8-bit input-output port (port 7): Each of bits 7.0 to 7.7 can be configured to be an input or an output by the direction register of port 7 (P7DIR). In addition to the basic function as the input-output port, a secondary function is allocated to each of P7.4 through P7.7. Refer to the next table.
	78 to 1	COM1 to COM4	O	LCD common signal output pins
	2 to 17	SEG0 to SEG15	O	LCD segment signal output pins

## Secondary Functions

Function	Pin	Symbol	Type	Description
External Interrupt	60	INT0	I	Secondary function of P0.0: Input pin for external interrupt 0. This pin can receive an input at rising edge, falling edge, or both the rising/falling edges.
	56	INT1/GATE	I	Secondary function of P0.4: Input pin for external interrupt 1. This pin can receive input at an rising edge, falling edge, or both the rising/falling edges. Also used as a gate signal input pin to enable or disable the count of timer 0.
Timer 0	70	TOCK	I	Secondary function of P0.3: External clock input pin for timer 0.
Timer 1	71	T1OUT	O	Secondary function of P0.2: Output pin that provides waveform with twice the cycle of the overflow of timer 1.
A/D Converter	19 to 24	AI0 to AI5	I	Secondary function of P3.0 to 3.5: These are used for analog channels during A/D conversion.
PWM	61	PWM0	O	Secondary function of P1.3: Output pin of PWM channel 0.
	62	PWM1	O	Secondary function of P1.2: Output pin of PWM channel 1.
Clock Output	55	CLKOUT	O	Secondary function of P0.5: Output pin that provides clocks equal to OSCCLK divided by 2 or 4.
Buzzer Output	53	BZ	O	Secondary function of P0.7: Output pin for buzzer.
Remote Control Input	49	INTRMC	I	Secondary function of P1.4: Input pin for remote control.
Shift Register	48	SFT02	O	Secondary function of P7.7: Data output pin for shift register 2.
	47	SFTI2	I	Secondary function of P7.6: Data input pin for shift register 2.
	46	SFTCK2	I/O	Secondary function of P7.5: Sync clock input-output pin for shift register 2. This provides a clock output when used as the master, while it functions as a clock input when used as a slave.
Control	59	HSTOP	I	Secondary function of P0.1

Conversion Time*	$t_{CONV}$		$f_{OSC} = 5MHz$	—	32	—
						μs/CH

\* The conversion time immediately after GO bit is set to "1" is 29.6μs/CH.

**Definition of Terms**

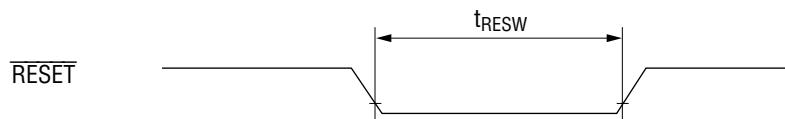

Resolution	Recognizable minimum input analog value. This can be resolved into $2^8 = 256$ , that is $AV_{DD} \div 256$ in 8 bits.
Linearity Error	Deviation between ideal conversion characteristics as an 8-bit A/D converter and actual conversion characteristics. (Not including quantization error.) Ideal conversion characteristics means a step which divides voltage between $V_{RH}$ and $L_{RL}$ into 256.
Differential Linearity Error	Smoothness of conversion characteristics. $1LSB = AV_{DD} \div 256$ is ideal for analog input voltage width corresponding to change per 1 bit of digital output. Deviation between the ideal bit size and bit size at arbitrary point in conversion range.
Zero Scale Error	Deviation between ideal conversion characteristics of transfer point for digital outputs "000H" to "001H" and actual conversion characteristics.
Full Scale Error	Deviation between ideal conversion characteristics of transfer point for digital outputs "OFEH" to "OFFH" and actual conversion characteristics.

## Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.

Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
